

SECTION 1 Exploring Physical Science *continued*

Critical Thinking

6. Compare How is physics different from chemistry?

Say It

Ask Questions Write down four questions that physics may be able to help you answer. Share your questions with a small group.

PHYSICS

The second area of physical science is physics. Like chemistry, physics has to do with matter. *Physics* is the study of how energy affects matter. The study of physics can help you understand how a roller coaster works and what keeps it on its tracks.

You can tell that a roller coaster has energy. When you study physics, you will learn what makes the roller coaster ride so exciting.

Why does a ball roll down a hill? Why doesn't a brick roll down the same hill? How does a parachute let someone jump out of an airplane without getting hurt? How can a compass tell you which way is north? Physics can help you answer questions like these.

Motion, force, gravity, electricity, light, and heat are parts of physics. They are also things that you experience in your everyday life. For example, when you ride a bike, you are dealing with force and motion. If you fall off the bike, you are affected by gravity.

How Do Other Branches of Science Use Physical Science?

You learn about matter and energy when you study physical science. However, matter and energy are important in other branches of science, too. Many kinds of scientists use ideas from physical science in their work.
