founded on the Boltzmann equation The conveyed energy engenders ablation pressure equivalent to tens of millions of atmospheres on the solid surface This pressure initiates powerful shock waves propagating through the solid material The propagation of these shock waves is delineated for scenarios involving planar and spherical geometries The text also introduces various solutions pertaining to convergent and divergent shocks in spherical geometries using self similar models The discourse then shifts towards ionization and related atomic processes which govern the dynamics of plasmas created by laser irradiation of mid Z and high Z solids The quantum mechanics of partially ionized atoms and their associated atomic processes are elucidated Concluding the book is an exploration of the physics of warm dense matter WDM an electron system characterized by quantum mechanical many body interactions The study of high density plasmas featuring temperatures around 1 eV is undertaken through the lens of density functional theory DFT The theoretical breakdown of experimental data acquired via the X ray free electron laser X FEL is also provided In essence this second volume of the series amalgamates a comprehensive understanding of compressible hydrodynamics shock wave physics ionization processes energy transfer and the realm of warm dense matter It equips readers to delve into the intricacies of plasma physics and laser interactions while utilizing modern theoretical frameworks and experimental methodologies This is an open access book (Free Sample)

Chandra has given us a view of the universe that is largely hidden from telescopes sensitive only to visible light In Chandra s Cosmos the Smithsonian Astrophysical Observatory s Chandra science spokesperson Wallace H Tucker uses a series of short connected stories to describe the telescope s exploration of the hot high energy face of the universe The book is organized in three parts The Big covering the cosmic web dark energy dark matter and massive clusters of galaxies The Bad exploring neutron stars stellar black holes and supermassive black holes and The Beautiful discussing stars exoplanets and life Chandra has imaged the spectacular glowing remains of exploded stars and taken spectra showing the dispersal of their elements Chandra has observed the region around the supermassive black hole in the center of our Milky Way and traced the separation of dark matter from normal matter in the collision of galaxies contributing to both dark matter and dark energy studies Tucker explores the implications of these observations in an entertaining informative narrative aimed at space buffs and general readers alike

Physics of the Human Temporality Ihor Lubashevsky,Natalie Plavinska,2021-10-21 This book presents a novel account of the human temporal dimension called the human temporality and develops a special mathematical formalism for describing such an object as the human mind One of the characteristic features of the human mind is its temporal extent For objects of physical reality only the present exists which may be conceived as a point like moment in time In the human temporality the past retained in the memory the imaginary future and the present coexist and are closely intertwined and impact one another This book focuses on one of the fragments of the human temporality called the complex present A detailed analysis of the classical and modern concepts has enabled the authors to put forward the idea of the multi component structure of the present For the concept of the complex present the authors proposed a novel account that involves a qualitative description and a special mathematical formalism This formalism takes into account human goal oriented behavior and uncertainty in human perception The present book can be interesting for theoreticians physicists dealing with modeling systems where the human factor plays a crucial role philosophers who are interested in applying philosophical concepts to constructing mathematical models and psychologists whose research is related to modeling mental processes
