Few-Body Problems in Physics '98 Bertrand Desplanques, Konstantin Protasov, Bernard Silvestre-Brac, Jaume Carbonell, 2012-12-06 The sixteenth European Conference on Few Body Problems in Physics has taken place from June 1 to June 6 1998 in Autrans a little village in the mountains close to Grenoble The Conference follows those organized in Peniscola 1995 Amsterdam 1993 Elba 1991 Uzhgorod 1990 The present one has been organized by a group of physicists working in different fields at the University Joseph Fourier of Grenoble who find in this occasion a good opportunity to join their efforts The core of the organizing committee was nevertheless located at the Institut des Sciences Nucleaires whose physicists especially in the group of theoretical physics have a long tradition in the domain The Few Body Conference has a natural tendency to be a theoretical one the exchange about the methods used in different fields is the common point to most participants It also has a tendency to be a hadronic physics one the corresponding physics community perhaps due to the existence of experimental facilities devoted to the study of few body systems is better organized In preparing the scientific program we largely relied on the advices of the International Advisory Committee while avoiding to follow these trends too closely

Operator Algebras and Mathematical Physics Palle E. T. Jørgensen, Paul S. Muhly, 1987 This volume contains papers presented at the University of

Iowa 1985 Summer Conference in honor of H J Borchers N M Hugenholtz R V Kadison and D Kastler and gives a systematic up to date treatment of the fruitful interaction that the last two decades have brought between operator algebras and mathematical physics Special attention is paid to an overview of the algebraic approach to quantum field theory and in particular to quantum statistical mechanics More than half the papers culminate with a presentation of new results which have not appeared previously in journals and with a few exceptions these new results are presented with complete proofs This book is addressed to graduate students and researchers working in a broad spectrum of areas in mathematics and mathematical physics Functional analysis operator algebras operator theory differential geometry cyclic cohomology K theory and index theory are applied to questions in the quantum theory of fields and statistical mechanics The individual papers are self contained but the reader should have some familiarity with the basic concepts of functional analysis and operator theory although no physics background is assumed
