Fixed Income Securities Bruce Tuckman, Angel Serrat, 2011-10-13. Fixed income practitioners need to understand the conceptual frameworks of their field to master its quantitative tool kit and to be well versed in its cash flow and pricing conventions. Fixed Income Securities Third Edition by Bruce Tuckman and Angel Serrat is designed to balance these three objectives. The book presents theory without unnecessary abstraction, quantitative techniques with a minimum of mathematics and conventions at a useful level of detail. The book begins with an overview of global fixed income markets and continues with the fundamentals: namely, arbitrage, pricing, interest rates, risk metrics, and term structure models to price contingent claims. Subsequent chapters cover individual markets and securities: repo rate and bond forwards and futures, interest rate and basis swaps, credit markets, fixed income options, and mortgage backed securities. Fixed Income Securities Third Edition is full of examples, applications, and case studies. Practically every quantitative concept is illustrated through real market data. This practice oriented approach makes the book particularly useful for the working professional. This third edition is a considerable revision and expansion of the second. Most examples have been updated. The chapters on fixed income options and mortgage backed securities have been considerably expanded to include a broader range of securities and valuation methodologies. Also, three new chapters have been added: the global overview of fixed income markets, a chapter on corporate bonds and credit default swaps, and a chapter on discounting with bases, which is the foundation for the relatively recent practice of discounting swap cash flows with curves based on money market rates.
