Brain Glycogen Metabolism Mauro DiNuzzo, Arne Schousboe, 2019-10-31 This book aims to provide a state of the art summary of what is currently known about brain glycogen metabolism detailing the recent advances in our understanding of why glycogen is so critical for normal brain function The role of glycogen in cellular neurophysiology remains largely unclear and its specific contribution to the energy demand of brain cells is still elusive Glycogen is the sole cerebral glucose reserve and is emerging as a fundamental component of brain energy metabolism Pharmacological or genetic manipulation of glycogen metabolism in the brain impairs memory formation and increases susceptibility to epileptic seizures and cortical spreading depression Glycogen is also directly implicated in abnormal neuronal excitability and mental retardation that characterize brain disorders like Lafora disease and Pompe disease

Fast 2D Solution-state NMR Dr Jean-Nicolas Dumez, Professor Patrick Giraudeau, 2023-05-17 Written by active investigators in the field this book describes state of the art methods that can accelerate the acquisition of 2D NMR spectra in solution state NMR The acquisition of fast multi dimensional NMR data has motivated numerous ground breaking developments in NMR pulse sequences and associated data processing methods These in turn have revolutionized the way 2D NMR acquisitions are performed at the same time broadening the scope of applications of 2D NMR The first part of the book provides an in depth description of the concepts and implementation of major fast 2D NMR methods The second part

follows with illustrations of how such methods can be used in applications that require the acquisition of fast 2D NMR spectra from reaction monitoring to hyperpolarization including applications to a broad variety of samples and experimental conditions Appealing to readers from both the methodology and applications communities this title will fill a gap in the market for a book focused on small molecule NMR and researchers from both academia and industry will find a rich plethora of knowledge

Radiopathology of Organs and Tissues Eberhard Scherer,Christian Streffer,Klaus-Rüdiger Trott,2012-12-06 The biologic effects of radiation on normal tissues and tumors represent a complex area for investigation These effects are of far reaching consequence to the diagnostic radiologist and the radiation oncologist having a significant impact not only in concepts relative to radiation protection but also in concepts relative to tumor biology and its response to radiation injury The volume edited by SCHERER STREFFER and TROTT represents an extension of basic radiation biology data into the effects of radiation in producing pathology in organs and tissues The data presented by the multiple authors involved in this text cover essentially all tissues in the body with specific definition of radiopathology changes and their impact on clinical care of the patient This volume represents an important and significant contribution toward a better understanding of these effects and the pathology produced by radiations L W BRADY H P HEILMANN F HEUCK M W DONNER Philadelphia Hamburg Stuttgart Baltimore

Preface This book represents an attempt to describe the clinical radiobiology of complications arising in different organs after radiotherapy of cancer patients Since by their very nature malignant tumors infiltrate the organ in which they have arisen and the neighboring tissues curative radiotherapy requires the planned irradiation of considerable amounts of healthy but potentially or microscopically involved normal tissues and organs with the full target dose This may lead to early or late normal tissue radiation injury

The Neural Crest Nicole Le Douarin,Chaya Kalcheim,1999-11-28 This 1999 edition of The Neural Crest contains comprehensive information about the neural crest a structure unique to the vertebrate embryo which has only a transient existence in early embryonic life The ontogeny of the neural crest embodies the most important issues in developmental biology as the neural crest is considered to have played a crucial role in evolution of the vertebrate phylum Data that analyse neural crest ontogeny in murine and zebrafish embryos have been included in this revision This revised edition also takes advantage of recent advances in our understanding of markers of neural crest cell subpopulations and a full chapter is now devoted to cell lineage analysis The major research breakthrough since the first edition has been the introduction of molecular biology to neural crest research enabling an elucidation of many molecular mechanisms of neural crest development This book is essential reading for students and researchers in developmental biology cell biology and neuroscience

The Idea of the Labyrinth from Classical Antiquity through the Middle Ages Penelope Reed Doob,2019-03-15 Ancient and medieval labyrinths embody paradox according to Penelope Reed Doob Their structure allows a double perspective the baffling fragmented prospect

confronting the maze treader within and the comprehensive vision available to those without Mazes simultaneously assert order and chaos artistry and confusion articulated clarity and bewildering complexity perfected pattern and hesitant process In this handsomely illustrated book Doob reconstructs from a variety of literary and visual sources the idea of the labyrinth from the classical period through the Middle Ages Doob first examines several complementary traditions of the maze topos showing how ancient historical and geographical writings generate metaphors in which the labyrinth signifies admirable complexity while poetic texts tend to suggest that the labyrinth is a sign of moral duplicity She then describes two common models of the labyrinth and explores their formal implications the unicursal model with no false turnings found almost universally in the visual arts and the multicursal model with blind alleys and dead ends characteristic of literary texts This paradigmatic clash between the labyrinths of art and of literature becomes a key to the metaphorical potential of the maze as Doob s examination of a vast array of materials from the classical period through the Middle Ages suggests She concludes with linked readings of four labyrinths of words Virgil s Aeneid Boethius Consolation of Philosophy Dante s Divine Comedy and Chaucer s House of Fame each of which plays with and transforms received ideas of the labyrinth as well as reflecting and responding to aspects of the texts that influenced it Doob not only provides fresh theoretical and historical perspectives on the labyrinth tradition but also portrays a complex medieval aesthetic that helps us to approach structurally elaborate early works Readers in such fields as Classical literature Medieval Studies Renaissance Studies comparative literature literary theory art history and intellectual history will welcome this wide ranging and illuminating book Development of Metabolism as Related to Nutrition P.
