

Appendix D

ANSWERS TO SOME PROBLEMS

1-1. (a) At standard temperature and pressure, a mole of an ideal gas contains 6.022×10^{23} molecules (Avogadro's number) and occupies 22.4 liters. Hence, the number per m^3 is $6.022 \times 10^{23}/22.4 \times 10^{-3} = 2.66 \times 10^{25} \text{ m}^{-3}$.

(b) Since $PV = NRT$, $n = N/V = P/RT$. Hence $n_1/n_0 = P_1T_0/P_0T_1$. Taking n_0 to be the density in part (a) and n_1 to be that in part (b), we have

$$n_1 = (2.66 \times 10^{25}) \frac{10^{-3}}{760} \frac{273}{(273 + 20)} = 3.30 \times 10^{24} \text{ m}^{-3}$$

Note that a diatomic gas such as H_2 will have twice as many atoms per torr as, say, He.

1-2. Consider the integral

$$I^2 = \int_{-\infty}^{\infty} e^{-x^2} dx \int_{-\infty}^{\infty} e^{-y^2} dy = \iint_{-\infty}^{\infty} e^{-(x^2+y^2)} dx dy$$

in a two-dimensional space. Transforming to cylindrical coordinates, we have

$$\begin{aligned} I^2 &= \iint e^{-r^2} r dr d\phi = 2\pi \int_0^{\infty} e^{-r^2} r dr \\ &= \pi \int_0^{\infty} e^{-r^2} d(r^2) = -\pi e^{-r^2} \Big|_0^{\infty} = \pi \end{aligned}$$

Hence,

$$I = \int_{-\infty}^{\infty} e^{-x^2} dx = \sqrt{\pi}$$

Engineering Education ,1982 *Lectures on Numerical Methods for Non-Linear Variational Problems* R. Glowinski, 2008-01-22 When Herb Keller suggested more than two years ago that we update our lectures held at the Tata Institute of Fundamental Research in 1977 and then have it published in the collection

Springer Series in Computational Physics we thought at first that it would be an easy task. Actually we realized very quickly that it would be more complicated than what it seemed at first glance for several reasons. 1. The first version of Numerical Methods for Nonlinear Variational Problems was in fact part of a set of monographs on numerical mathematics published in a short span of time by the Tata Institute of Fundamental Research in its well known series Lectures on Mathematics and Physics as might be expected the first version systematically used the material of the above monographs this being particularly true for Lectures on the Finite Element Method by P. G. Ciarlet and Lectures on Optimization Theory and Algorithms by J. Cea. This second version had to be more self contained. This necessity led to some minor additions in Chapters I-IV of the original version and to the introduction of a chapter namely Chapter V of this book on relaxation methods since these methods play an important role in various parts of this book.

Origins of Clinical Chemistry Louis Rosenfeld, 2012-12-02. *Origins of Clinical Chemistry: The Evolution of Protein Analysis* covers the history of the application of analytical methods to the plasma protein analysis. This book is divided into 20 chapters that consider the relationship between the limitation of technical accuracy and clinical interpretation. The introductory chapters provide an overview of the concept and issues in protein chemistry as well as the history of organic chemistry. The succeeding chapters deal with the classification, detection, fractionation and analysis of proteins. Considerable chapters are devoted to various analytical techniques for protein analysis including colorimetry, photometry, Svedberg technique, ultracentrifuging, zone electrophoresis, immunohistochemical methods and radioimmunoassay. The remaining chapters examine the detection and analysis of proteins in several body fluids such as urine and cerebrospinal fluid. This book will be of great value to clinical analytical and organic chemists as well as to protein scientists and researchers.

Advances in Heat Transfer, 2010-11-02. *Advances in Heat Transfer* fills the information gap between regularly scheduled journals and university level textbooks by providing in depth review articles over a broader scope than in journals or texts. The articles which serve as a broad review for experts in the field will also be of great interest to non specialists who need to keep up to date with the results of the latest research. This serial is essential reading for all mechanical, chemical and industrial engineers working in the field of heat transfer, graduate schools or industry. Provides an overview of review articles.
