Characterization of Ore-Forming Systems from Geological, Geochemical and Geophysical Studies K.

Gessner, T.G. Blenkinsop, P. Sorjonen-Ward, 2018-08-07 Economically viable concentrations of mineral resources are uncommon in Earth's crust. Most ore deposits that were mined in the past or are currently being extracted were found at or near Earth's surface often serendipitously. To meet the future demand for mineral resources, exploration success hinges on identifying targets at depth. Achieving this requires accurate and informed models of the Earth's crust that are consistent with all available geological, geochemical, and geophysical information paired with an understanding of how ore-forming systems relate to Earth's evolving structure. Contributions to this volume address the future resources challenge by i) applying advanced microscale geochemical detection and characterization methods; ii) introducing more rigorous 3D Earth models; iii) exploring critical behaviour and coupled processes; iv) evaluating the role of geodynamic and tectonic setting; and v) applying 3D structural models to characterize specific ore-forming systems.

Tumor Board Review, Second Edition Kathleen A. Cooney, Teresa G. Hayes, Martha Pritchett Mims, Robert F. Todd III, Francis P. Worden, 2015-02-12 Praise for the First Edition: As everyone in oncology fellowship training knows, there is a huge information gap in this field. Most oncology books are massive and loaded with information; by the time the book is published, it is outdated. *Tumor Board Review* is fresh and just out of the oven. I haven't seen any book in oncology like this so far. I think my investment in this book was wise and worth it. Humaid Al Shamsi MB Hon BMedSc MRCP UK FRCP FACP Assistant Professor, The University of Texas MD Anderson Cancer Center. Culling the knowledge and expertise of respected oncology specialists, this is a concise yet comprehensive review of all areas of oncology practice for medical oncologists, radiation oncologists, and pathologists, both students and practitioners. The second edition of *Tumor Board Review* has been thoroughly revised to encompass recent scientific advances in assessment and treatment, new clinical guidelines, and new FDA-approved drugs and indications. It also contains approximately 250 multiple-choice questions and answers to assist readers in testing their knowledge, especially those preparing for the MOC exam. The book features case presentations and evidence-based management discussions that clearly demonstrate how to apply new information in daily practice. In a consistent format, each chapter addresses epidemiology, risk factors, natural history, and pathology of each major organ-specific tumor type; an abbreviated display of relevant staging; and several tumor board-style illustrative patient case studies. This is followed by an evidence-based case discussion which reinforces current guidelines and explains the rationale for the diagnostic and therapeutic steps taken. Algorithms and decision tree graphics further illuminate the decision process. **NEW TO THE SECOND EDITION OF TUMOR BOARD REVIEW** Presents the most recent guidelines and management standards in user-friendly format. Focuses on current indications, use of new drugs, and new treatment of side effects. Includes new FDA-approved drugs and guidelines. Offers approximately 250 multiple-choice questions and answers.
