Introduction

Childhood obesity is a condition, which negatively affects a child's health and wellbeing due to the excess body fats. The prevalence of obesity in most children makes it a serious health concern. This is evident from the fact that it has many adverse health effects to the children. In the United States, an estimation of about 17 percent of children and adolescents are obese.

Childhood obesity being a rare occurrence in the past, it is now amongst the most widespread health problems affecting children and adolescents. The changes that occur in the physical and social environments of the children add up to the causes of obesity. In mitigating the effects of child obesity, several stakeholders are involved who include state health agencies, family members, community at large and health plans (Graves, Meyers, & Clark, 1988).

Problems of Childhood obesity

Childhood obesity has several problems that it presents to the child. One of the problems that it poses to a child is that obesity increases the chances of a child getting pediatric hypertension. Secondly, childhood obesity can lead to a diabetic condition known as type II diabetes mellitus thus an obese child risks getting this health problem.

Another problem that childhood obesity brings about is that there is the risk of contracting coronary heart disease by a child. Another problem of childhood obesity is that obese children experience low self-esteem hence affecting their relations with peers. In another context, social and psychological problems can be associated to childhood obesity as the most significant consequences in children.

The problems of psychological toll on children can also lead to adverse problems such as drug and alcohol abuse, depression and eating disorders. The most likely eating disorders that they might experience are anorexia and bulimia. Another significant problem associated with childhood obesity is the risk of having high blood

Research Paper On Childhood Obesity:

Childhood Obesity and Health Research Richard K. Flamenbaum, 2006 Obesity in children and adolescents is a serious issue with many health and social consequences that often continue into adulthood Implementing prevention programs and getting a better understanding of treatment for youngsters is important to controlling the obesity epidemic The term childhood obesity may refer to both children and adolescents Between 5 25 percent of children and teenagers in the United States are obese As with adults the prevalence of obesity in the young varies by ethnic group It is estimated that 5 7 percent of White and Black children are obese while 12 percent of Hispanic boys and 19 percent of Hispanic girls are obese Some data indicate that obesity among children is on the increase The second National Children and Youth Fitness Study found 6 9 year olds to have thicker skinfolds than their counterparts in the 1960s During the same period others documented a 54 percent increase in the prevalence of obesity among 6 11 year olds This book examines leading research in this area of great concern to society

Future Research Needs for Childhood Obesity Prevention Programs U. S. Department of Health and Human Services, Agency for Healthcare Research and Quality, 2013-09-22 Childhood obesity is highly prevalent in the U S and has become a global epidemic The 2007 2008 National Health and Nutrition Examination Survey data showed that 17% of U S children and adolescents ages 2 19 years were obese and over 30% were overweight or obese Childhood obesity leads to obesity in adulthood and many other serious health conditions such as cardiovascular metabolic and psychosocial illnesses To assess the effectiveness of existing childhood obesity prevention efforts the Johns Hopkins University Evidence based Practice Center completed a systematic review on childhood obesity prevention studies conducted in high income countries This report systematically reviewed seven key questions What is the comparative effectiveness of school based interventions for the prevention of obesity or overweight in children What is the comparative effectiveness of home based interventions for the prevention of obesity or overweight in children What is the comparative effectiveness of primary care based interventions for the prevention of obesity or overweight in children What is the comparative effectiveness of childcare setting based interventions for the prevention of obesity or overweight in children What is the comparative effectiveness of community based or environment level interventions for the prevention of obesity or overweight in children What is the comparative effectiveness of consumer health informatics applications for the prevention of obesity or overweight in children What is the comparative effectiveness of multi setting interventions for the prevention of obesity or overweight in children Though the strength of evidence is moderate to high for school based interventions the limited number of studies and insufficient or low strength of evidence to support interventions in other settings made it difficult to conclude that interventions in other settings could effectively prevent childhood obesity Based on the evidence gaps in these settings we identified the following as Future Research Needs Future research is needed on interventions delivered in settings other than schools or home While there have been other reviews on the effectiveness of interventions on food and nutrition policies

at school on changes in children's diet and school food environments there are still gaps in the literature on some aspects such as the impact of regulations on food availability and its impact on obesity prevention. Only a few studies that we reviewed used social marketing to deliver messages on nutrition, physical activity and health. This approach might be integrated with other intervention components to create an atmosphere favorable to healthy and active lifestyles and related behavioral changes. Further testing of the value of consumer health informatics products for obesity prevention is needed. In addition, there is a lack of evidence on the impact of regional or national policies on childhood obesity prevention. Further research might be conducted with stratified analyses on subgroups such as by gender, age, race, ethnicity or socioeconomic status. There were methodological limitations of the reviewed studies which suggest that future research might improve upon the methods. Few of the studies we reviewed reported process evaluation which would provide useful insight regarding why some studies might detect a desirable effect of the intervention. Future studies need to design innovative approaches that have a high likelihood of sustainability. This may be designed to take advantage of other existing public health, government or other organization supported programs or try to gain more support and engagement from related key stakeholders. The objective of this report is to prioritize the needs for research addressing gaps in the existing literature on the effectiveness of childhood obesity prevention programs by engaging expert stakeholders using a modified Delphi method.

Childhood Obesity Prevention Jennifer A. O'Dea, Michael P. Eriksen, 2010. Childhood obesity is an international public health concern with a high profile in both the media and government policy. Controversial issues in the prevention of childhood obesity need to be considered early in the development of school, clinical or community prevention programs as these issues are often the ones that promote the success or failure of attempts to ameliorate the problem at hand. This book combines health education, theory, research and practice to guide researchers, students, educators, community health workers and practitioners in the prevention of childhood obesity and the promotion of child and adolescent health and well-being. It examines controversy in childhood obesity including the link with poverty and the difficulty of addressing obesity whilst also tackling the issue of eating disorders. The prevalence of childhood obesity is covered with international chapters examining the importance of factors such as social class and ethnic differences and global and local trends are identified. Approaches to prevention are presented and the book concludes with the successful outcome of various interventions demonstrating how the whole school community can collaborate to promote health among young people.

Progress in Preventing Childhood Obesity Institute of Medicine, Food and Nutrition Board, Committee on Progress in Preventing Childhood Obesity, 2007-02-22 The remarkable increase in the prevalence of obesity among children and youth in the United States over a relatively short timespan represents one of the defining public health challenges of the 21st century The country is beginning to recognize childhood obesity as a major public health epidemic that will incur substantial costs to the nation However the current level of investment by the public and private sectors still does not match the extent of the problem There is a substantial underinvestment of resources to adequately address the scope of this obesity crisis At this early phase in addressing the

epidemic actions have begun on a number of levels to improve the dietary patterns and to increase the physical activity levels of young people. Schools, corporations, youth-related organizations, families, communities, foundations, and government agencies are working to implement a variety of policy changes, new programs, and other interventions. These efforts, however, generally remain fragmented and small in scale. Moreover, the lack of systematic monitoring and evaluation of interventions has hindered the development of an evidence base to identify, apply, and disseminate lessons learned and to support promising efforts to prevent childhood obesity.

Progress in Preventing Childhood Obesity: How Do We Measure Up? examines the progress made by obesity prevention initiatives in the United States from 2004 to 2006. This book will be of interest to federal, state, and local government agencies, educators, and schools, public health and health care professionals, private sector companies, and industry trade groups, media, parents, and those involved in implementing community-based programs and consumer advocacy.
