Fast and Scalable Cloud Data Management Felix Gessert, Wolfram Wingerath, Norbert Ritter, 2020-05-15 The unprecedented scale at which data is both produced and consumed today has generated a large demand for scalable data management solutions facilitating fast access from all over the world As one consequence a plethora of non relational distributed NoSQL database systems have risen in recent years and today s data management system landscape has thus become somewhat hard to overlook As another consequence complex polyglot designs and elaborate schemes for data distribution and delivery have become the norm for building applications that connect users and organizations across the globe but choosing the right combination of systems for a given use case has become increasingly difficult as well To help practitioners stay on top of that challenge this book presents a comprehensive overview and classification of the current system landscape in cloud data management as well as a survey of the state of the art approaches for efficient data distribution and delivery to end user devices The topics covered thus range from NoSQL storage systems and polyglot architectures backend over distributed transactions and Web caching network to data access and rendering performance in the client end user By distinguishing popular data management systems by data model consistency guarantees and other dimensions of interest this book provides an abstract framework for reasoning about the overall design space and the individual positions claimed by each of the systems therein Building on this classification this book further presents an application driven decision guidance tool that breaks the process of choosing a set of viable system candidates for a given application scenario down into a straightforward decision tree

Kacprzyk,2016-06-17 These proceedings present the results of the Eleventh International Conference on Dependability and Complex Systems DepCoS RELCOMEX which took place in a picturesque Brun w Palace in Poland from 27th June to 1st July 2016 DepCoS RELCOMEX is a series of international conferences organized annually by Department of Computer Engineering of Wroc aw University of Science and Technology since 2006 The roots of the series go as far back as to the seventies of the previous century the first RELCOMEX conference took place in 1977 and now its main aim is to promote a multi disciplinary approach to dependability problems in theory and engineering practice of complex systems Complex systems nowadays most often computer based and distributed are built upon a variety of technical information software and human resources The challenges in their design analysis and maintenance not only originate from the involved technical and organizational structures but also from the complexity of the information processes that must be efficiently executed in a diverse often hostile operational environment Traditional methods of reliability evaluation focused only on technical resources are usually insufficient in this context and more innovative multidisciplinary methods of dependability analysis must be applied The diversity of the topics which need to be considered is well illustrated by the selection of the submissions
