

EVOLUTION UNIT GUIDE ANSWERS

Recall and Review: Use the videos and your textbook to help you answer the following questions.

Section 10.2

1. Describe the difference between a variation and an adaptation.

Variation	Adaptation
<i>differences in the physical traits of an individual from those of other individuals in the group to which it belongs</i>	<i>feature that allows an organism to better survive and reproduce in its environment: an advantage</i>

2. Explain why tortoises of the same species look different

They live in different areas and those organisms possess variations that allow them to be most successful in their particular area.

3. List two things Darwin learned from his trip to the Galapagos.

- I. *Organisms within the same species have a lot of variety; those variations may become an adaptation that allows them to better survive and reproduce.*
- II. *Fossil evidence showed species changing over time.*

Section 10.3

4. State the four main principles of natural selection.

1. *Variation*
2. *Overproduction /Competition*
3. *Adaptation*
4. *Descent with modification*

5. Briefly explain how each of the above principles is necessary for natural selection to occur.

In order for there to be a reason for natural selection, there have to be more individuals present than the environment can support. Because of this, there is competition between the organisms. Those with variations that give them an advantage will be more likely to survive and reproduce. Therefore their descendant will inherit those modifications.

Section 10.4

6. Describe the four sources of evidence for evolution upon which Darwin based his ideas on common ancestry.

- A. *Fossil Record*
- B. *Biogeography*
- C. *Developmental (Embryology)*
- D. *Comparative Anatomy*

7. Why are vestigial structures considered critical evidence of evolution? Give an example of a vestigial structure.

Because they are structures that we still possess in our bodies but yet there is little to no function needed for them anymore. An example is the small pelvis found in snakes and whales.

8. Describe the difference between homologous and analogous structures.

Evolutionary Thinking Across Disciplines Agathe du Crest, Martina Valković, André Ariew, Hugh Desmond, Philippe Huneman, Thomas A. C. Reydon, 2023-06-26 This volume aims to clarify the epistemic potential of applying evolutionary thinking outside biology and provides a survey of the current state of the art in research on relevant topics in the life sciences the philosophy of science and the various areas of evolutionary research outside the life sciences By bringing together chapters by evolutionary biologists systematic biologists philosophers of biology philosophers of social science complex systems modelers psychologists anthropologists economists linguists historians and educators the volume examines evolutionary thinking within and outside the life sciences from a multidisciplinary perspective While the chapters written by biologists and philosophers of science address theoretical aspects of the guiding questions and aims of the volume the chapters written by researchers from the other areas approach them from the perspective of applying evolutionary thinking to non biological phenomena Taken together the chapters in this volume do not only show how evolutionary thinking can be fruitfully applied in various areas of investigation but also highlight numerous open problems unanswered questions and issues on which more clarity is needed As such the volume can serve as a starting point for future research on the application of evolutionary thinking across disciplines

Evolution and Social Psychology Mark Schaller, Jeffry A. Simpson, Douglas T. Kenrick, 2013-05-13 Why do we think about and interact with other people in the particular ways that we do Might these thoughts and actions be contemporary products of our long ago evolutionary past If so how might this be and what are the implications Research generated by an evolutionary approach to social psychology issues profound insights into self concept impression formation prejudice group dynamics helping aggression social influence culture and every other topic that is fundamental to social psychology *Evolution and Social Psychology* is the first book to review and discuss this broad range of social psychological phenomena from an evolutionary perspective It does so with a critical and constructive eye Readers will emerge with a clear sense of the intellectual challenges as well as the scientific benefits of an evolutionarily informed social psychology The world renowned contributors identify new questions new theories and new hypotheses many of which are only now beginning to be tested Thus this book not only summarizes the current status of the field it also sets an agenda for the next generation of research on evolution and social psychology *Evolution and Social Psychology* is essential reading for evolutionary psychologists and social psychologists alike

The Major Transitions in Evolution John Maynard Smith, Eors Szathmary, 1997-10-30 During evolution there have been several major changes in the way that genetic information is organized and transmitted from one generation to the next These transitions include the origin of life itself the first eukaryotic cells reproduction by sexual means the appearance of multicellular plants and animals the emergence of cooperation and of animal societies and the unique language ability of humans This is the first book to discuss all of these major transitions In discussing such a wide range of topics in one volume the authors are able to highlight the similarities

between different transitions for example between the union of replicating molecules to form chromosomes and of cells to form multicellular organisms The authors also show how an understanding of one transition sheds light on others A common theme in the book is that entities that could replicate independently before the transition can replicate afterwards only as part of a larger whole Why then does selection between entities at the lower level not disrupt selection at the higher level In answering this question the authors offer an explanation for the evolution of cooperation at all levels of complexity Written in a clear style and illustrated with many original diagrams this book can be read with enjoyment by anyone with an undergraduate training in the biological sciences It will be ideal for advanced discussion groups on evolution Although the content ranges widely from molecular biology to linguistics and from intragenomic conflict to insect societies no detailed knowledge of any of these topics is required Mathematical models are clearly explained and equations and formulae are kept to a minimum

Evolution, Scripture, and Science B. B. Warfield, 2019-09-10 Are naturalistic and Christian creation irreconcilable ideologies In this collection of B B Warfield s writings editors Mark A Noll and David N Livingstone demonstrate that theologians have not always thought so Around the turn of the twentieth century Princeton theologian B B Warfield believed that synthesizing his commitment to the scientific validity of evolution and to the inerrancy of the Bible was an attainable theological task By drawing reasonable distinctions among Darwinism Charles Darwin and evolution he was able to accept the probability of evolution while denying the implications of full blown Darwinism In the realm of inerrancy and evolution Warfield s writings exemplify civil Christian scholarship and shrewd scientific discernment The editors have carefully gleaned Warfield s writings on evolution and inerrancy from theological essays book reviews lectures and historical papers Editorial headnotes introduce the reader to each article s context and content However the editors let Warfield s articles speak for themselves and inform the contemporary dialogue between science and theology Referring to the current debate the editors concur that One way of jolting discussion about science and theology out of the fervent but also intellectually barren stand offs of recent decades is to note one of the best kept secrets in American intellectual history B B Warfield

The Literary Digest International Book Review Clifford Smyth,1924 Laying Down Arms to Heal the Creation-Evolution Divide Gary N. Fugle,2015-01-01 Battles over creation or evolution have been perpetuated for years by vocal Christians and scientists alike But conflict has never been the only choice Laying Down Arms to Heal the Creation Evolution Divide presents a comprehensive uplifting alternative that brings together an orthodox biblical view of a sovereign Creator God and the meaningful discoveries of modern evolutionary biology Gary Fugle offers unique insights into this debate from his dual perspective as both an award winning biology professor and a committed leader in conservative evangelical churches In focusing on the stumbling blocks that surround creation and evolution debates Fugle sensitively addresses the concerns of skeptical Christians and demonstrates how believers may celebrate evolution as a remarkable aspect of God s glory He describes how the mainstream scientific community as well as numerous Christians may alter current approaches to eliminate conflicts He explains conservative readings of early Genesis that respect both the inerrant words of Scripture and the evolutionary revelations in God s natural creation This book is for individuals who sense that biblical Christian faith and evolution are compatible without compromising core convictions If given good reasons to do so are we willing to lay down our arms to affirm an encompassing vision for the future **The Saturday Review of Politics, Literature, Science and Art** ,1877
