- Tibialis Posterior
- Flexor digitorum longus
- Flexor hallucis longus
- Calcaneal tendon

Tibialis posterior tendon reconstruction is a surgical procedure aimed at restoring function to the tibialis posterior tendon, which runs along the inner side of the ankle and supports the arch of the foot. This surgery is typically recommended for individuals suffering from posterior tibial tendon dysfunction (PTTD), also known as adult-acquired flatfoot. PTTD occurs when the tendon becomes inflamed, stretched, or torn, resulting in the collapse of the foot's arch and pain during walking or standing.
