The Essence of Research Methodology Jan Jonker, Bartjan Pennink, 2010-03-10 Methodology is the eld which is indisputably complex In the academic world it is often said to be important yet in everyday academic practice it is not always treated accordingly In teaching methodology is often a mandatory course Usually it consists of learning how to adopt several common approaches when doing research and how to conceive a research design often leading to a survey This usually leads to collecting data on a modest scale and when the opportunity arises analysing the data with the help of some statistics Ask the students of their opinion at the end of such a course and they tend to heave a deep sigh of relief and say I have got through it Then their real courses start again in which methodology often does not play a role at all We are of the

opinion that writing off methodology in this way is a real pity. It ignores the valuable role that methodology should play in academic teaching as a whole. Here methodology is presented as a form of thinking and acting that while obviously entailing research work can also include the design and change of organisations. This broad approach has been purposefully chosen as it is almost obvious from research and graduation projects that the students do not really have a clue what methodology involves and therefore wasting their time by producing work that has a little quality.

Research Methodology KHRITISH SWARGIARY, 2025-05-01

It is with great pleasure and a deep sense of responsibility that I present this book titled Research Methodology for B A 5th Semester Gauhati University. This book has been meticulously crafted to serve as a comprehensive guide for students enrolled in the Four Year Undergraduate Programme FYUGP specifically for the course titled Research Methodology under the subject of Education. As an integral part of the B A curriculum, this subject has been designed not only to equip students with the fundamental knowledge and skills required in the field of educational research but also to foster a deeper understanding of its significance in the academic and professional spheres. Research plays an essential role in the continuous development of educational systems and policies. It provides the foundation for evidence based decision making, supports the exploration of new ideas and promotes an informed and reflective approach to the teaching learning process. The course outlined in this book covers the key aspects of educational research ensuring that students are introduced to both theoretical concepts and practical applications that will guide them throughout their academic and professional journeys. The learning outcomes of this course as described aim to empower students with a robust understanding of the concepts surrounding educational research. They will gain knowledge of the various types of educational research, fundamental applied and action research along with the key steps involved in conducting meaningful research. Students will also learn the intricacies of preparing a research proposal, a skill that will be invaluable for their future research endeavors. The contents of this book are divided into five main units. In Unit 1 we explore the meaning, definitions, characteristics and objectives of educational research, offering an in depth understanding of its scope and importance. In Unit 2 we dive into the process of formulating a research proposal, including the development of research questions, objectives, hypotheses and the use of research tools such as questionnaires, interview schedules and observation schedules. Unit 3 focuses on the review of related literature, emphasizing its nature, sources and the critical role it plays in shaping the direction of research. Unit 4 delves into research design, the significance of population and sample selection and the methods of data collection, organization, analysis and interpretation. Finally, in Unit 5 we discuss report writing, guiding students through the structure and organization of research reports, which is crucial for presenting their research findings in a clear and professional manner. This book is designed not only to support students in their coursework but also to inspire a passion for research and inquiry. It is my hope that students upon completing this course will not only understand the process of conducting educational research but also develop the critical thinking skills necessary to engage in thoughtful, reflective and impactful research in the field of
