Introduction to Mechanics of Particles and Systems Costas J. Papachristou, 2020-09-09 This book is based on the author's lecture notes for his Introductory Newtonian Mechanics course at the Hellenic Naval Academy In order to familiarize students with the use of several basic mathematical tools such as vectors differential operators and differential equations it first presents the elements of vector analysis that are needed in the subsequent chapters Further the Mathematical Supplement at the end of the book offers a brief introduction to the concepts of differential calculus mentioned The main text is divided into three parts the first of which presents the mechanics of a single particle from both the kinetic and the dynamical perspectives The second part then focuses on the mechanics of more complex structures such as systems of particles rigid bodies and ideal fluids while the third part consists of 60 fully solved problems Though chiefly intended as a primary text for freshman level physics courses the book can also be used as a supplemental tutorial resource for introductory courses on classical mechanics for physicists and engineers

Fundamentals of Biofuels Engineering and Technology Cataldo De Blasio, 2019-04-09 This book explores the use of biomass as an energy source and its application in energy conversion technologies Focusing on the challenges of and technologies related to biomass conversion the book is divided into three parts The first part underlines the fundamental concepts that form the basis of biomass production its feasibility valuation and its potential utilization This part does not consider only how biomass is generated but also methods of assessment The second part focuses on the clarification of central concepts of the biorefinery processes After a preliminary introduction with industrial examples common issues of biochemical reaction engineering applications are analysed in detail The theory explained in this part demonstrates that the chemical kinetics are the core focus in modelling biological processes such as growth decay product formation and feedstock consumption This part continues with the theory of biofuels production including biogas bioethanol biodiesel and Fischer Tropsch synthesis of hydrocarbons The third part of this book gives detailed explanations of preliminary notions related to the theory of thermodynamics This theory will assist the reader when taking into account the concepts treated in the previous two parts of the book Several detailed derivations are given to give the reader a full understanding of the arguments at hand This part also gives literature data on the main properties of some biomass feedstock *Fundamentals of Biofuels Engineering and Technology* will be of interest not only to academics and researchers working in this field but also to graduate students and energy professionals seeking to expand their knowledge of this increasingly important area

Introduction to Unified Mechanics Theory with Applications Cemal Basaran, 2023-01-04 This second edition adds

new sections on derivation of dynamic equilibrium equations in unified mechanics theory and solution of an example derivation of very high cycle fatigue thermodynamic fundamental equation and application verification with two metal fatigue examples derivation of thermodynamic fundamental equations for metal corrosion examples of corrosion fatigue interaction There is also an example of ultrasonic vibration fatigue and one traditional tension compression loading in elastic regime While updated and augmented throughout the book retains its description of the mathematical formulation and proof of the unified mechanics theory UMT which is based on the unification of Newton's laws and the laws of thermodynamics It also presents formulations and experimental verifications of the theory for thermal mechanical electrical corrosion chemical and fatigue loads and it discusses why the original universal laws of motion proposed by Isaac Newton in 1687 are incomplete The author provides concrete examples such as how Newton's second law $F = ma$ gives the initial acceleration of a soccer ball kicked by a player but does not tell us how and when the ball would come to a stop Over the course of the text Dr Basaran illustrates that Newtonian mechanics does not account for the thermodynamic changes happening in a system over its usable lifetime And in this context this book explains how to design a system to perform its intended functions safely over its usable life time and predicts the expected lifetime of the system without using empirical models a process currently done using Newtonian mechanics and empirical degradation failure fatigue models which are curve fit to test data Written as a textbook suitable for upper level undergraduate mechanics courses as well as first year graduate level courses this book is the result of over 25 years of scientific activity with the contribution of dozens of scientists from around the world

From Assessing to Conserving Biodiversity Elena Casetta, Jorge Marques da Silva, Davide Vecchi, 2019-06-17 This open access book features essays written by philosophers biologists ecologists and conservation scientists facing the current biodiversity crisis Despite increasing communication accelerating policy and management responses and notwithstanding improving ecosystem assessment and endangered species knowledge conserving biodiversity continues to be more a concern than an accomplished task Why is it so The overexploitation of natural resources by our species is a frequently recognised factor while the short term economic interests of governments and stakeholders typically clash with the burdens that implementing conservation actions imply But this is not the whole story This book develops a different perspective on the problem by exploring the conceptual challenges and practical defiance posed by conserving biodiversity namely on the one hand the difficulties in defining what biodiversity is and characterizing that thing to which the word biodiversity refers to on the other hand the reasons why assessing biodiversity and putting in place effective conservation actions is arduous

A Powerful Particulars View of Causation R.D. Ingthorsson, 2021-01-26 This book critically examines the recent discussions of powers and powers based accounts of causation. The author then develops an original view of powers based causation that aims to be compatible with the theories and findings of natural science. Recently there has been a dramatic revival of realist approaches to properties and causation which focus on the relevance of Aristotelian metaphysics and the notion of powers for a scientifically informed view of causation. In this book R D Ingthorsson argues that one central feature of powers based accounts of causation is arguably incompatible with what is today recognised as fact in the sciences, notably that all interactions are thoroughly reciprocal. Ingthorsson's powerful particulars view of causation accommodates for the reciprocity of interactions. It also draws out the consequences of that view for issue of causal necessity and offers a way to understand the constitution and persistence of compound objects as causal phenomena. Furthermore, Ingthorsson argues that compound

entities so understood are just as much processes as they are substances A Powerful Particulars View of Causation will be of great interest to scholars and advanced students working in metaphysics philosophy of science and neo Aristotelian philosophy while also being accessible for a general audience The Open Access version of this book available at <http://www.taylorfrancis.com/books/9781003094241> has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license

E.J. Lowe and Ontology Mirosław Szatkowski, 2022-03-17 This volume collects fifteen original essays on E.J. Lowe's work on metaphysics and ontology The essays connect Lowe's insights with contemporary issues in metaphysics E.J. Lowe 1950-2014 was one of the most influential analytical philosophers of the twentieth and early twenty-first century Drawing inspiration from Aristotle's thought E.J. Lowe treated metaphysics as an autonomous discipline concerned with the fundamental structure of reality The chapters in this volume reflect on his path-breaking work They deal with a wide range of metaphysical issues including four-category ontology the causal and non-causal aspects of agency categorial fundamentality and non-fundamentality the existence of relations property dualism powers and abilities personal identity predication and topological ontology Taken together the chapters reflect the liveliness of contemporary debates in metaphysics and the enduring impact of Lowe's thought on them E.J. Lowe and Ontology will be of interest to researchers and advanced students working in metaphysics and philosophy of mind
