Resources Management In Construction:

Human Resource Management in Construction Projects Martin Loosemore, Andrew Dainty, Helen Lingard, 2003-12-08 Although construction is one of the most labour intensive industries people management issues are given inadequate attention Furthermore the focus of attention with regards to HR has been on the strategic aspects of HRM function yet most problems and operational issues arise on projects To help redress these problems this book takes a broad view of HRM examining the strategic and operational aspects of managing people within the construction sector The book is aimed at project managers and students of project management who until now have been handed the responsibility for human resource management without adequate knowledge or training The issues addressed in this book are internationally relevant and are of fundamental concern to both students and practitioners involved in the management of construction projects The text draws on the authors experience of working with a range of large construction companies in improving their HRM operational activities at both strategic and operational levels and is well illustrated with case studies of projects and organizations

Resource Management for Construction M. R. Canter, 1993 Offers a new approach to the management of resources within the construction industry and with special reference to smaller construction companies A systems approach based on a case study is adopted to describe how the basic production resources are planned for monitored and managed

Human Resource Management in Construction Andrew Dainty, Martin Loosemore, 2013-05-07 The construction sector is one of the most complex and problematic arenas within which to manage people As a result the applicability of much mainstream human resource management HRM theory to this industry is limited Indeed the operational realities faced by construction organizations mean that all too often the needs of employees are subjugated by performance concerns This has potentially dire consequences for those who work in the industry for the firms that employ them and ultimately for the prosperity and productivity of the industry as a whole In this new edition of their leading text Andrew Dainty and Martin Loosemore have assembled a collection of perspectives which critically examine key aspects of the HRM function in the context of contemporary construction organizations Rather than simply update the previous edition the aim of this second edition is to provide a more critical commentary on the ways in which the industry addresses the HRM function and how this affects those who work within the industry To this end the editors have gathered contributions from many of the leading thinkers within construction HRM to critique the perspectives presented in the first edition Each contributor either tackles specific aspects of the HRM function or provides a critical commentary on industry practice The authors explain using real life case studies the ways in which construction firms respond to the myriad pressures that they face through their HRM practices Together the contributions encourage the reader to rethink the HRM function and its role in defining the employment relationship This provides essential reading for students of construction and project management and reflective practitioners who are interested in theoretically informed insights into industry practice

and its implications Simulation-based Resource Management for Construction Projects Ibrahim Hacko Yattara,2001

Human Resources Management in Construction D. A. Langford,2014-09-25 Human Resources Management in Construction fills an important gap in current management literature by applying general principles of human resources management specifically to the construction industry It discusses and explores findings from research to supplement the theoretical and practical procedures used It explores issues such as the technology used and the pattern of social and political relationships within which people are managed Resource Management for the Construction Industry Martin Keller,George Antoniadis,Karsten Menzel,2004 *Contemporary Issues in Construction in Developing Countries* George Ofori,2012-06-26 Economic growth and socio economic development are particularly important for developing countries and the construction industry plays a central role in driving both of these Traditionally the issues faced have been assumed to be merely offshoots of those encountered in industrialised nations and are usually discussed only in this context In addition research in construction management and economics has generally failed to take proper account of the unique or highly emphasised characteristics of the industries in developing countries or their economic and social environment This volume challenges underlying assumptions and focuses on the distinct characteristics of construction in developing countries In so doing it considers the issues from the perspective of the developing countries themselves to present a strong contemporary picture for researchers It forms a companion volume to *New Perspectives on Construction in Developing Countries* which provides an update on the generic subjects relating to the construction industry in developing countries and covers new concepts and issues **Routledge Handbook of Smart Built Environment** Weisheng Lu,Chimay J. Anumba,2025-03-20
