Diseases of the respiratory system may affect the nose and throat, the bronchial tubes or the lungs. Avoiding sources of infection or irritation and practicing good health habits can help prevent many respiratory diseases.

BRONCHITIS

Bronchitis (brahn KYT us) is an inflammation of the mucus membrane that lines the bronchial tubes. Thick mucus build up, causing coughing, difficulty in breathing, and a heavy feeling in the chest. Bronchitis may be caused by bacteria, viruses or irritants in the air.

The word chronic (KRAHN ik) means that a disease is long lasting, recurs regularly and requires repeated or continuous treatment. An **acute** medical condition comes on quickly and can cause severe symptoms, but it lasts only a short time (no longer than a few weeks). Smokers and other people who are continually exposed to harmful airborne substances often develop chronic bronchitis.

Bronchitis caused by bacteria can be treated with antibiotics. However, the infection can weaken the body and lower resistance to other infections. If not treated promptly, bronchitis can persist for an extended period of time.

PNEUMONIA

Pneumonia (nyu MOH nyuh) is an inflammation of the air sacs in the lungs. The inflammation is usually caused by infection, but it can also be caused by foreign particles that are inhaled. The air sacs fill with fluid and dead white blood cells making breathing more difficult. Symptoms of pneumonia can include shortness of breath, a high fever, chills, coughing, and chest pain. Treatment depends on the type of infection causing the inflammation. Pneumonia caused by bacteria can be treated with antibiotics. Severe pneumonia can result in death, especially among people whose bodies are already weakened by another disease.

Respiratory System Diseases

With bronchitis, air passages in the lungs are swollen.
