Abstract

India has population of 1.3 billion people with median age of 28 years and sixty-five percent of the population is below the age of 35 years. India is enjoying demographic dividend. These young Indians should be prudent during their work life and must do financial planning so that funds are available when it is required. In absence of such plan, individuals would face financial difficulty and in extreme cases may face bankruptcy. Financial plan helps in matching the demand for funds with adequate supply of funds. Financial plan should be goal oriented and it should take care of needs in the most crucial period of life – retirement life. As per RBI report (2016) on household finance, seventy-seven percent of Indians do not save for retirement. Therefore, financial planning for retirement should be essential part of financial planning during the working years. Individual's financial behavior is influenced by many factors which can be divided into demographic and psychological factors.

This paper aims to evaluate relevance of demographic and psychological factors in making saving and investment decision with focus on retirement financial planning. The study will be based on primary as well as on the secondary data. To understand theoretical framework and predictor variables, research papers and articles would be referred. Primary data on demographic and psychological variables would be collected through structured questionnaire. Data would be collected from the individuals working in private sector, between the age group of 25 to 45 years, in the city of Bengaluru. This research would be relevant in getting insight into factors and issues faced by the individual while making financial plans for retirement.

Key Words: retirement planning, attitude towards retirement, financial goals

White, 2009-04-21

Across the world, governments in mature industrial and post-industrial economies are concerned about the ageing population. Dealing directly and exclusively with the issue of older workers, this book brings together up-to-the-minute research findings by many of the leading researchers and writers in the field. The duration and quality of working lives and the timing and circumstances of retirement are of growing concern, especially in those cases where employers' demands and imperatives clash with employees' wishes. The contributions in this volume focus upon various measures taken by the state and employers to foster the employment of older workers in Britain, mainland Europe, the US, and Japan. The authors address key issues that will influence public policy, exploring what workers over 50 want, the impact of the ageing workforce on employer policies, and the implications for governments in promoting and supporting extended working lives. The book is aimed at academics, students, policy makers, and other professionals such as training managers, HR professionals, and trade unionists interested in contemporary issues within social policy, the sociology of ageing, and human resource and diversity management. It will also be of interest to older workers themselves.

Systemic Service Design Mari Suoheimo, Peter Jones, Sheng-Hung Lee, Birger Sevaldson, 2025-02-17 Systemic Service Design provides a comprehensive overview of how systems theories can be integrated into service design to address complex social economic technological challenges Across 14 chapters split into two sections the book connects theoretical backgrounds and practical worldwide case studies to explore various approaches to systems thinking The field of service design has evolved significantly in recent years from focusing on touchpoints and user interactions to being seen as a

driver for organizational transformation and increasingly a key component in transdisciplinary spaces involving complex systems. However, while service design has grown over the past few decades, it has also recognized its limitations in addressing complex societal problems. For example, the book highlights how a lack of holistic understanding of the systems in place can lead to service failure, which ultimately results in societal issues relating to unemployment, healthcare, and public transportation. As such, this book offers theoretical and practical resources specifically tailored to service designers in order to equip them with the ability to develop solutions that are appropriate in scope, depth, and feasibility to address these complex issues. Contributing authors draw upon and integrate theories from related disciplinary fields to extend the contextualization of service design within complex systems, providing readers with more scientific frames of reference. The book also draws upon case studies from South and North America, Europe, Asia, and Australia to offer readers wide-ranging perspectives and real-life examples to further their understanding of systemic service design and demonstrate how to integrate it successfully. The book delivers theoretical and practical knowledge for students and designers in the fields of service design, design for policy, social design, and additionally for managers, public and private sector planners, engineers, and politicians.
