alloy design Although the relationships of properties of alloys to their composition and structure have long been a dominant theme in physical metallurgy it is only recently that metallurgists have turned their attention from the analytical post hoc study of the structure property relationship to the synthesis approach of alloy design As usual in the Battelle colloquia the first day started with a group of introductory lectures presented by leaders in the field each emphasizing his personal approach to the problem This provided a historical perspective for the colloquium These papers together with the banquet address of Professor J R Low Jr who was honored at the colloquium comprise the introductory section of these proceedings Alloy design is generally specific to a given application Thus the needs in alloy design in a number of important applications gas turbines electrical power generation equipment airframes pressure vessels and nuclear applications were presented in a group of papers An agenda discussion on Needs in Alloy Design followed These papers give the external constraints on alloy design applications and criteria for mechanical physical and chemical properties for which the alloys must be designed

Crossing Boundaries, Building Bridges Annie Canel, Ruth Oldenziel, 2005-08-08 Women engineers have been in the public limelight for decades yet we have surprisingly little historically grounded understanding of women in this field This book considers the mechanisms of exclusion and inclusion of them [Energy Research Abstracts](#), 1989 **South Africa's water governance hydraulic mission (1912-2008) in a WEF-Nexus context** Johann W.N. Tempelhoff, 2018-12-01 Geologists physicists and ecologists currently promote the idea of a post Holocene epoch the Anthropocene As a result of constant innovation and modernisation in the fields of engineering natural science management studies and environmental studies there has been a growing awareness of the intrinsic interaction between humankind and the environment Humankind has become part of the environmental dynamics to the extent that they are literally able to change ecosystems Nowhere is the impact more evident than in the anthropogenic engagement with the hydrosphere from the smallest pool of water to the earth's atmosphere Comprehensive infrastructure development in water and sanitation the growing trend to seek additional resources in the form of groundwater desalinated seawater and recycled wastewater as well as special attention being given to capturing and preserving rainwater bear evidence of a timely response to climate change population growth and rapid development in many water stressed regions of the world The purpose of the book is to provide a historical overview of the manner in which South Africa's water resources have been governed from a time when the Union of South Africa was formed in 1910 up to 2008 a time of a growing global awareness of the potential impact that climate change may have on water resources in a key region of southern Africa notable for increasing levels of aridity and more erratic rainfall patterns This focus on the history of water affairs in South Africa makes it possible for scholars to comprehend the contemporary transitions made in the country's water governance system since the establishment in 2014 of the Department of Water and Sanitation The focus is on the Water Energy Food nexus a strategy which holistically contemplates the governance and use of water from the perspective of the interconnection between water energy and food as resources
