Respiratory Support Strategies in the Prevention and Treatment of Bronchopulmonary Dysplasia Huayan Zhang, Robin McKinney, 2023-07-26

Infant chronic lung disease CLD or bronchopulmonary dysplasia BPD one of the most common complications of prematurity carries consequences of high mortality and morbidity Lengthy hospitalizations frequent readmissions chronic cardiopulmonary impairment poor growth and long term neurodevelopmental impairment are common in these patients As a result it is a disease with high social economic impact both to the health care system and society Over the past few decades advances in neonatal intensive care have led to improved survival of extremely premature infants world wide especially in low and middle income countries LMICs This increased survival has also led to a larger number of infants with extremely immature lungs that are prone to abnormal lung development and lung injury Consequently the incidence of BPD has not decreased Although respiratory support is a mainstay therapy for premature infants with acute or chronic respiratory insufficiency there is currently a lack of strong evidence based respiratory support strategies both in the prevention of BPD and treatment of infants with established BPD Over the years there has been a series of advancements in the respiratory management of premature infants including but not limited to less invasive methods of pulmonary surfactant delivery multiple modalities of non invasive respiratory support neonatal specific ventilators with better synchronization and monitoring capabilities use of permissive hypercapnia to minimize the level of ventilation support and international agreement on the oxygen saturation target However there have been controversies in the safety and efficacy of some of these treatments and much more needs to be learned in how to best apply some of these therapies especially in infants with evolving BPD and established BPD as well as in resource limited settings This Research Topic will focus on respiratory support strategies in the prevention and treatment of BPD We welcome both experimental and clinical research articles exploring the impacts of respiratory support on pulmonary mechanics lung injury lung growth and overall health in premature infants both during their early postnatal days and after they are diagnosed with BPD This article collection will explore but is not limited to the following thematic areas

- 1 Delivery room respiratory management in the prevention of BPD
- 2 Use of non invasive respiratory support in premature infants with respiratory distress syndrome RDS evolving BPD or established BPD
- 3 Mechanical ventilation strategies in intubated premature infants with RDS evolving BPD or established BPD
- 4 Neurally Adjusted Ventilatory Assist NAVA use in the prevention or treatment of BPD
- 5 Cardio pulmonary interaction during respiratory support in preterm infants
- 6 Effects of different respiratory support modalities on pulmonary mechanics lung injury and BPD associated pulmonary hypertension
- 7 Impact of respiratory support on the growth and development of premature infants
- 8 Nursing care of premature infants on invasive or non invasive respiratory support
- 9 Tracheostomy and long term ventilation for infants with BPD
- 10 Post discharge respiratory support management and respiratory follow up for infants with BPD
- 11 Impact of infection bacterial or viral including but not limited to gram negative organisms RSV influenza

COVID 19 and others on respiratory function in infants with BPD 12 Adjunctive therapies in addition to respiratory support in BPD prevention or in the treatment of BPD 13 Utility of bedside imaging e g lung ultrasound bronchoscopy electric impedance tomography etc in the selection and adjustment of respiratory support 14 Respiratory support related quality improvement in the prevention or management of BPD 15 Family and staff education to care for premature infants with respiratory support
