The Nervous System

The nervous system is an extremely complex, highly intricate, and very sensitive structure that regulates everything that happens throughout the human body. The main purpose of all the nervous system and its various parts is to carry and send information, and give the body the ability to respond to stimuli. The nervous system is divided into two main parts: the central nervous system (CNS) and the peripheral nervous system (PNS).

Central Nervous System

The central nervous system, or CNS, is the part of the nervous system that is located in the brain and spinal cord. It is the most complex part of the nervous system. The brain is the control center of the body, and is located within the protective skull. Layers of meningeal membranes and cerebrospinal fluid also protect the CNS. The spinal cord consists of a long, thin, tube-like structure that runs through the vertebral column. It has an S-shaped curve to the spinal cord, and a part of the spinal cord, called the cauda equina, extends from the lower back into the body.

Peripheral Nervous System

There are all parts of the nervous system that are not the CNS, and they make up the peripheral nervous system (PNS). The PNS is made up of all sensory neurons that are capable of receiving stimuli, and motor neurons that are capable of responding to stimuli. For example, sensory neurons in the eye and ear detect light and sound, and motor neurons are involved in muscles that contract and relax.

The PNS is divided into two main parts: the somatic nervous system, which controls voluntary movements, and the autonomic nervous system, which controls involuntary movements. The somatic nervous system is the part of the nervous system that is responsible for controlling voluntary movements. It is the part of the nervous system that is responsible for controlling the muscles and organs of the body. The autonomic nervous system is the part of the nervous system that is responsible for controlling involuntary movements. It is the part of the nervous system that is responsible for controlling the heart, lungs, and other organs of the body.

The Brain

The brain is the most complex part of the nervous system. It is the control center of the body, and is responsible for all the functions of the body. The brain is made up of billions of neurons, which are the basic units of the nervous system. The brain is divided into two main parts: the cerebrum, which is the part of the brain that is responsible for conscious thought and voluntary movements, and the cerebellum, which is the part of the brain that is responsible for unconscious thought and involuntary movements. The brain is also divided into four main regions: the cerebrum, the cerebellum, the brainstem, and the limbic system.
