*Nutritional Cognitive Neuroscience Research at the Crossroads of Nutrition, Psychology, and Neuroscience* Aron K. Barbey,Elizabeth J. Johnson,Margaret Joy Dauncey,2019-01-23 Nutritional Cognitive Neuroscience is an emerging interdisciplinary field of research that seeks to understand nutrition s impact on human cognition and brain health across the life span Research in this burgeoning field demonstrates that many aspects of nutrition from entire diets to specific nutrients affect brain structure and function and therefore have profound implications for understanding the nature of psychological health aging and disease The aim of this Research Topic in *Frontiers in Aging Neuroscience* is to examine recent empirical and theoretical contributions from Nutritional Cognitive Neuroscience with an emphasis on the following primary areas of inquiry Nutrition and Brain Health An enduring aim of research in the nutritional sciences is to discover specific nutrients and dietary patterns that enhance cognitive function and brain health in the elderly Although an abundance of evidence supports a single or a few nutrients for the promotion of cognitive performance and brain health clinical trials using nutritional supplementation have been predominately unsuccessful Further research is therefore needed to better characterize the contributions of specific nutrients and nutrient combinations to cognitive performance and brain health Moderators of Nutrition s Impact on the Brain A second major area of research in Nutritional Cognitive Neuroscience investigates the mechanisms that underlie the effects of nutrition on brain health at the cellular molecular and circuit levels Accumulating evidence indicates that the effects of nutrition on brain health are complex and multifactorial reflecting the influence of particular nutrient combinations on specific brain networks and taking into account several moderating factors Considerably more research is needed to elucidate the complex interactions between nutrition and known moderating variables including age nutritional status genes environment and lifestyle in determining nutrition s impact on cognitive

**Biological Mechanism-Based and Patient-Centered Management of Cancer-Related Symptoms and Syndromes** Antonio Macciò, Silvia Busquets, Clelia Madeddu, Josep M. Argilés, 2019-03-22 The lack of recovery prospects in advanced cancer patients has often led to neglect important achievable therapeutic objectives such as Quality of Life QL improvement aimed at preserving for as long as possible patient integration with their family and social environment In fact traditional antineoplastic therapy protocols have been for a long time designed to demonstrate an advantage in clinical response and survival but have ignored essential supportive therapies and psychological and social well being safeguard programs Recent research of early integrated palliative care including supportive care aimed to obtain patient centered therapeutic objectives Noteworthy advanced cancer patients often present a multiplicity of signs and symptoms responsible for physical impairment and reduction of functional abilities with consequent impossibility of carrying out the common daily activities Additionally the psycho emotional integrity the maintenance of family and social relationships and the spiritual issues contribute substantially to the optimal patients QL Then in the care of cancer patients their physical psychological social and spiritual needs should be globally addressed In this context cancer related symptoms which often occur in advanced stage cancer patients and can be either improved or worsened by the antineoplastic therapy should be treated simultaneously with the planning and implementation of the most appropriate antineoplastic therapy Therefore any therapeutic approach should ideally be introduced within a context of the best supportive care which includes optimal symptom management To obtain this scope the knowledge and awareness of the biological specificity of the disease and patient psychosocial interactions can no longer be considered optional by the multidisciplinary medical team in charge To date many of the mechanisms at the basis of the pathogenesis of many cancer

related symptoms are far from being fully understood Consequently an effective treatment is yet lacking and represent an unmet need in oncology clinical practice This Research Topic includes articles in the field of biochemical and molecular investigations physiological and clinical studies related to the pathogenesis and potential targeted approaches of some important cancer signs and symptoms We focused on cachexia anorexia muscle wasting osteopenia cancer related anemia physical inactivity and fatigue The Research Topic includes Original Research Review and Perspective articles

### **Endogenous and Exogenous Molecules Modulating Voltage-Gated Potassium Channels** Damon

Frampton, 2024-10-02 The superfamily of voltage gated potassium KV channels is crucial for the normal function of several tissues and represents an attractive pharmacological target for treating disorders such as epilepsy and cardiac arrhythmias However any drug designed to target a KV channel must be capable of discriminating between different members within the superfamily lest they plague the user with deleterious side effects Such rational design requires structural and functional insight into how the selectivity of a molecule can be tailored to suit the intended target This thesis combines the use of electrophysiological and computational techniques to investigate the molecular basis for how the function of hKV7 and hERG channels can be modulated by different lipophilic compounds with known or suspected effects on ion channels These include polyunsaturated fatty acids PUFAs cannabidiol CBD and synthetic cannabinoid receptor agonists SCRA's Using the two electrode voltage clamp technique on *Xenopus* oocytes we find that both PUFAs and CBD modulate the function of hKV7 channels in subtype specific manners PUFAs facilitated the activation of hKV7 channels except for hKV7 4 channels which were instead inhibited Molecular dynamics simulations revealed that structural differences in the voltage sensing domain of hKV7 4 conferred a unique inhibitory PUFA interaction site absent in the other hKV7 subtypes Once this site was neutralised by mutagenesis PUFAs facilitated hKV7 4 activation In the case of CBD we observed three different responses inhibition of channels with hKV7 1 subunits potentiated voltage sensitivity of channels with hKV7 2 or hKV7 3 subunits and enhanced maximum conductance of channels with hKV7 4 or hKV7 5 subunits However these responses were evoked from the same interaction site in the pore domain indicating a more complex subtype specific mechanism of action Finally using an automated patch clamp system we screened 36 different SCRA's on the cardiac channels responsible for repolarisation hERG and hKV7 1 KCNE1 We find 28 of the SCRA's to be inhibitors of hERG and 22 to be inhibitors of hKV7 1 KCNE1 Molecular dynamics simulations suggest the increased susceptibility of hERG to SCRA mediated inhibition may be due to a unique central cavity site that is absent from the pore domain of hKV7 1 KCNE1 In conclusion structurally diverse lipophilic

molecules of endogenous and exogenous origins can interact with KV channels and influence their function by enhancing or interfering with functional domains In some instances structural differences in the channel protein can explain the discrepancies in pharmacology These findings have implications for both pharmacology informing rational drug design and toxicology identifying targets through which adverse effects may occur      **Microbial Syntrophy-mediated**

**Eco-enterprising** Raghvendra Pratap Singh,Geetanjali Manchanda,Kaushik Bhattacharjee,Hovik Panosyan,2022-02-09

Microbial Syntrophy Mediated Eco enterprising summarizes and reviews possible microbial applications for eco industrial sustainability The book emphasizes a wide spectrum of experimental and theoretical contributions from eminent researchers in the field In 13 chapters there is a focus on the microbial intrusions for remediating sites by accumulated pesticides heavy metals polyaromatic hydrocarbons and other industrial effluents Moreover the potentiality and key mechanisms used by microorganisms for sustainable environmental management and their prospects are also considered in this new release The term syntrophy for nutritional interdependence is often used in microbiology to describe the symbiotic relationship between bacterial species Understanding such interactions can be of considerable interest when we come to manipulate microbes to our own benefit such as by disrupting pathogenic communities with antibiotics or by promoting efficiency in communities that produce energy or break down waste Summarizes and reviews possible microbial applications for eco industrial sustainability Includes a wide spectrum of experimental and theoretical contributions from eminent researchers in the field Focuses on microbial intrusions for remediating sites and other industrial effluents      **Discourses of the Arab**

economics in the mass media and how this specialised form of reporting can be improved Beginning by introducing major concepts such as financialised economic reporting media amnesia and loss of trust the book goes on to help students to interpret understand and analyse existing news discourse and to identify subtle biases in news reports stemming from hegemonic belief systems The final section puts this analytical knowledge into practice providing students with methods for the critical production of news and covering such skills as identifying newsworthiness story sourcing achieving clarity and using complex datasets in news stories This is a key text for students and academics in the fields of financial journalism and critical discourse analysis who wish to approach the subject with a critical eye
