6 pages | 1452 words

In regard to its origin, dynamics and consequences breast cancer can be considered to be the second leading cause of cancer death among US and European women (Smith-Bindman et al, 2003). Every year over 200,000 women are diagnosed with breast cancer, and though statistical data remains constant, the issue gets significant psychological and public resonance (Jemal et al, 2004).

The overall lifetime risk for American women constitutes 1:8, which essentially means that out of eight females born today, one will receive a breast cancer diagnosis during her lifetime (Ogden, 2004). Mortality rates are highest among older African American women (American Cancer Society, 2001). Simultaneously, statistics reveals that diseased woman's life expectancy decreases by nineteen years.

Although medical scientists and practitioners debate on the methods regarding disease treatment and how to diminish the number of breast cancer cases, many public health analysts indicate about an education exigency of young people. Despite the fact that the younger generations are not aware of the importance of detecting breast cancer early, with the help of teens getting involved and teaching others about breast cancer, more lives will be saved.

The educational program developed for young people to prevent, forecast and diminish consequences of breast cancer involves several important aspects. Primarily, audience should know the essence of the disease, in particular its nature, various risk factors associated with it and methods of its prevention. Younger generation should be informed about how breast cancer or its first signs could be detected, what constitutes post-diagnosis procedure and treatments of the disease.

However, from the critical point of view, the main objective of such programs is to prevent the appearance of the disease and decrease to the minimum lethal consequences. This primary concern and emphasis are stipulated with the conditions under which if breast cancer is detected on its early stages, patients have from 78% to 92% survival rate (Ogden, 2004:10).

Breast cancer is considered to be a group of undifferentiated cells reproducing under extremely rapid rate in the area of the breast in women. The earliest changes usually appear in the epithelial cells of the terminal end buds of the breast milk system, where new cancer cells form tumors. If cancer cell are active, the tumor increases at significant rate and may result in metastasis.

Being a complex process in which cells are separated from their initial tumors and supplied trough blood and lymph systems to other organs, metastasis spreads the cancer throughout the body. According to generally accepted medical practice, if size of a lump does not exceed one centimeter, it is indicated as benign (Hart, 1999), however, in every case adequate medical consultation should be provided.

Medical specialists distinguish risk factors for breast cancer that individual can change and those that cannot be affected (Barton, 2005). Constant risk factors are considered to be being a woman, getting older, having a family history as well as previous breast cancer history, having radiation therapy to the chest area, being Caucasian, getting periods young, usually before 12 years old, having late...

The Voice of Breast Cancer in Medicine and Bioethics Mary C. Rawlinson, Shannon Lundeen, 2006-07-15 Few diseases have made more difference to our understanding of illness, the relation of the patient to the physician and other health care professionals and the social context of disease than breast cancer. Breast cancer activism has provided a model of public policy advocacy for women as well as for sufferers from other diseases and even in causes unrelated to health. In many

ways it has become emblematic of issues in women's health. This volume offers a discursive analysis of breast cancer. From multiple perspectives—historical, philosophical, psychological, socio-political—these essays explore the competing narratives that have made breast cancer a contested site. It addresses debates about the autonomy of the patient in relation to the authority of the physician as well as the importance of patient narratives in understanding disease. It analyzes the relation between the community and medical practice, particularly with regard to the effect of breast cancer activists and feminists on the medical understanding and treatment of breast cancer. And it questions the intersection of medical science with political institutions and agencies of public policy in determining priorities of research and strategies of treatment.

Review of Postgraduate Pathology (Systemic Pathology) Ramadas Nayak, Rakshatha Nayak, 2023-10-04 **NURSING: Solved Question Papers for BSc Nursing—4th Year (2012-1999)** I. Clement, 2012 **How to Read and Write Critically** Alex Baratta, 2021-09-22

To succeed in any assessment you need to demonstrate critical thinking, but what does it mean to be critical? This book takes a hands-on approach to helping you think, read, and write critically. Packed with examples from different disciplines and subjects, it talks through dozens of written extracts so you can see what criticality actually looks like. The book equips you with tools for making an argument, explaining your reasoning, and using examples to illustrate your points. Enables you to structure coherent arguments and choose appropriate language. Helps you interpret and apply feedback from your lecturers. For undergraduate students studying in any discipline, this clear guide takes the confusion out of reading and writing critically so you can approach your assessments with confidence.

Making Sense of Genes Kostas Kampourakis, 2017-03-30
What are genes? What do genes do? These seemingly simple questions are in fact challenging to answer accurately. As a result, there are widespread misunderstandings and over-simplistic answers which lead to common conceptions widely portrayed in the media, such as the existence of a gene for a particular characteristic or disease. In reality, the DNA we inherit interacts continuously with the environment and functions differently as we age. What our parents hand down to us is just the beginning of our life story. This comprehensive book analyses and explains the gene concept, combining philosophical, historical, psychological, and educational perspectives with current research in genetics and genomics. It summarises what we currently know and do not know about genes and the potential impact of genetics on all our lives. *Making Sense of Genes* is an accessible but rigorous introduction to contemporary genetics concepts for non-experts, undergraduate students, teachers, and healthcare professionals.
