

Understanding Concepts

- Classify the following examples as transverse, longitudinal, or torsional vibrations.
 - A ball attached to a spring is bouncing up and down.
 - An agitator moves in an upright washing machine.
 - A child swings on a swing.
 - A child sits on a swing with the ropes twisted, so the child is spinning as the ropes are unwinding.
- The mass of a pendulum moves a total horizontal distance of 14 cm in one cycle. What is the amplitude of the vibration?
- A Canada goose flaps its wings 16 times in 21 s. What is the frequency and period of the wing beat?
- The world record for pogo jumping is 122 000 times in 15 h 26 min.
 - What type of vibration is occurring in the spring of the pogo stick?
 - Calculate the average period of vibration.
 - Calculate the average frequency of vibration.
- Points A, B, C, D, and E are marked on a stretched rope (Figure 1). Pulses X and Y have the same shape and size, and travel through this rope at the same speed.
 - Which point(s) would have an instantaneous upward motion if both pulses moved to the right?
 - Which point(s) would have an instantaneous downward motion if pulse X moved to the right as pulse Y moved to the left?
 - Which point(s) would have no motion, provided the pulses moved in opposite directions?

Figure 1

- A sonar signal (sound wave) of 5.0×10^2 Hz travels through water with a wavelength of 3.0 m. What is the speed of the signal in water?
- Water waves with a wavelength of 6.0 m approach a lighthouse at 5.6 m/s.
 - What is the frequency of the waves?
 - What is their period?
- The distance between successive crests in a series of water waves is 5.0 m; the crests travel 8.6 m in 5.0 s. Calculate the frequency of a block of wood bobbing up and down in the water.
- Two people are fishing from small boats located 28 m apart. Waves pass through the water, and each person's boat bobs up and down 15 times in 1.0 min. At a time when one boat is on a crest, the other one is in a trough, and there is one crest between the two boats. What is the speed of the waves?
- The wavelength of a water wave is 3.7 m and its period is 1.5 s.
 - What is the speed of the wave?
 - What is the time required for the wave to travel 1.0×10^2 m?
 - What is the distance travelled by the wave in 1.00 min?
- A boat at anchor is rocked by waves whose crests are 32 m apart and whose speed is 8.0 m/s. What is the interval of time between crests striking the boat?
- The wavelength of a water wave is 8.0 m and its speed is 2.0 m/s. How many waves will pass a fixed point in the water in 1.0 min?
- When a car moves at a certain speed, there is an annoying rattle. If the driver speeds up or slows down slightly, the rattle disappears. Explain.
- A 6.0-m rope is used to produce standing waves. Draw a scale diagram of the standing wave pattern produced by waves having a wavelength of
 - 12 m
 - 6.0 m
 - 3.0 m
- Standing waves are produced in a string by sources at each end with a frequency of 10.0 Hz. The distance between the third node and the sixth node is 54 cm.
 - What is the wavelength of the interfering waves?
 - What is their speed?
- You send a pulse down a spring that is attached to a second spring with unknown properties. The positive pulse returns to you as a positive pulse, but with a smaller amplitude. Is the speed of the waves faster or slower in the second string? Explain your reasoning.
- When a stone is dropped into water, the resulting ripples spread farther and farther out, getting smaller and smaller in amplitude until they disappear. Why does the amplitude eventually decrease to zero?
- When standing waves are produced in a string, total destructive interference occurs at the nodes. What has happened to the wave energy?

Nelson Physics 11 Answers Chapter 8:

Global Optimization Leo Liberti, Nelson Maculan, 2006-06-22 Most books about global optimization describe the theory of the algorithms whereas a given implementation's quality never depends exclusively on the theoretical soundness of the algorithms that are implemented. The literature rarely discusses the tuning of algorithmic parameters, implementation tricks, software architectures and the embedding of local solvers within global solvers. And yet there are many good software implementations out there from which the entire community could learn something. The scope of this book is moving a few steps toward the systematization of the path that goes from the invention to the implementation and testing of a global optimization algorithm. Some of the contributors to the book are famous and some are less well known but all are experts in the discipline of actually getting global optimization to work. Thus the papers in this book address the following topics: Descriptions of new implementations of general purpose or problem specific global optimization algorithms. New algorithms in global optimization some with numerical results and a discussion of the implementation. Surveys discussing existing software packages.

Numerical Solution of Ordinary Differential Equations L. Fox, 2012-12-06 Nearly 20 years ago we produced a treatise of about the same length as this book entitled *Computing methods for scientists and engineers*. It was stated that most computation is performed by workers whose mathematical training stopped somewhere short of the professional level and that some books are therefore needed which use quite simple mathematics but which nevertheless communicate the essence of the numerical sense which is exhibited by the real computing experts and which is surely needed at least to some extent by all who use modern computers and modern numerical software. In that book we treated at no great length a variety of computational problems in which the material on ordinary differential equations occupied about 50 pages. At that time it was quite common to find books on numerical analysis with a little on each topic of that field whereas today we are more likely to see similarly sized books on each major topic for example on numerical linear algebra, numerical approximation, numerical solution of ordinary differential equations, numerical solution of partial differential equations and so on. These are needed because our numerical education and software have improved and because our relevant problems exhibit more variety and more difficulty. Ordinary differential equations are obvious candidates for such treatment and the current book is written in this sense.
