Metabolism of herbs/natural products and pharmacodynamic or toxic mechanisms Qi Wang, Bingyou Yang, Longlong Si, Shuai Ji, 2023-03-03 *Crustacean Reproductive Physiology and its Applications* Haihui Ye, Chaoshu Zeng, Naoaki Tsutsui, Heinrich Dirksen, 2022-09-27
Demand for crustacean production is increasing significantly throughout the world and crustacean production from capture fisheries has almost stagnated
Aquaculture is the only possibility to meet this ever growing demand for crustaceans
Still many commercially important crustaceans are being captured from the wild while breeding and seed production technologies are not available for these species
The bottleneck in the successful breeding of crustacean species is mainly due to the non availability of information about reproductive biology
Studies on crustacean reproduction will shed new light on understanding the mechanism of sex determination and differentiation
Meanwhile the application of innovative techniques will vitally contribute to the progress of the crustacean industry
The research findings on crustacean reproduction will directly benefit aquaculture for successful captive breeding and seed production
Here we are gathering both original research and review papers with the scope of the research topic including but not limited to Mechanism of sex determination sexual differentiation and gonadal development in crustaceans
Other life functions e g endocrine nutrition immunity heredity involved in reproduction in crustaceans
Applications of modern

endocrinological and molecular approaches contributed to crustacean reproduction **Systems Approach to Understanding the Biology of Cold Stress Responses in Plants** Rosalyn B. Angeles-Shim, Sunchung Park, Dhruv Lavania, Andy Pereira, 2022-09-07 *Cardiovascular Fibrosis and Related Diseases: Basic and Clinical Research Advances* Yihua Bei, Jiu-Chang Zhong, Hong S. Lu, 2022-04-19 **The Wildlife Gut Microbiome and Its Implication for Conservation Biology** Lifeng Zhu, Simon Bahrndorff, Jianjun Wang, 2021-08-19 **Opportunistic pathogens: pathogenesis and multi-drug resistance mechanisms** Shicheng Chen, Lisheng Liao, Mingxi Wang, 2025-04-17

The World Health Organization WHO has identified antimicrobial resistance AMR as one of the most critical global public health threats. At least 4.95 million people died were caused by AMR in 2019. Even worse, its potential economic impact is estimated to reach a staggering 100 trillion due to AMR in the next thirty years. <https://www.who.int/health-topics/antimicrobial-resistance>

Researching the development of antibiotic resistance and exploring ways to prevent, detect and treat antimicrobial resistant infections have been prioritized in the medical microbiology field. AMR mechanisms have been uncovered on many Enterobacteriaceae and Gram positive bacteria such as *Enterococcus faecium* and *Staphylococcus aureus* due to their clinical significance and diverse resistance mechanisms. Unfortunately, the opportunistic pathogens have been overlooked in the clinics because they are often identified as normal flora or common environmental organisms in human specimens. Opportunistic pathogens may have low pathogenicity while they can often cause serious infections in immunocompromised patients and lead to outbreak in the healthcare settings. They may even lead to diseases in healthy individuals if being introduced into hosts' system by traumatization. Management of such infections is often challenging due to the lack of guidelines, standards for antibiotic susceptibility tests as well as multi-drug resistance (MDR). Lately, diseases linked to non-pathogenic microorganisms are becoming more common under typical conditions such as *Stenotrophomonas maltophilia*, *Elizabethkingia* spp, *Acinetobacter baumannii* and many others. **Therapeutic potential of natural products in oxidative and metabolic diseases** Ochuko Lucky Erukainure, Aliyu Muhammad, Erukainure, Aliyu Muhammad, Chika Ifeanyi Chukwuma, Md Shahidul Islam, Olakunle Sanni, Veronica Folakemi Salau, 2024-04-26

Oxidative and metabolic diseases represent a large proportion of global challenges to health and quality of life. These diseases are often characterised by the imbalance between the cellular prooxidant products of metabolic processes and the antioxidant molecules within the cells. The imbalance often led to the underlying factors that exacerbate the pathogenesis of some life threatening diseases such as carcinogenesis, obesity, diabetes and cardiovascular diseases. Natural products including phytochemicals and functional foods are known for their ability to affect metabolic processes such as ameliorating reactive oxygen species induced mitochondria dysfunction, mitigating inflammatory response and other cellular functions that could ameliorate the disease developments. Despite the relatively low toxicities of natural products as compared with synthetic products, further studies are still required to optimize the bioavailability, therapeutics, pharmaceuticals and clinical trials of natural products in patients suffering oxidative and

2022 Fangfeng Yuan,Zhanbo Zhu,Dania AlQasrawi,Rafael Franco,2022-12-06 *Recent Advances in Understanding The Genetics of Immunological Disorders* Che Kang Lim,Jinqiao Sun,Hassan Abolhassani,2024-12-13 Immunological disorders are diseases or conditions due to the dysfunction of the immune system They include primary immunodeficiency syndromes autoimmune diseases asthma allergy and autoinflammatory syndromes These disorders disrupt our body s ability to defend against pathogens In addition it may lead to exaggerated chronic inflammatory responses and tissue damage Immunological disorders are clinically and genetically heterogeneous The phenotypic spectrum of the diseases is broad in some of the disorders On the other hand the clinical phenotype derived from distinct genotypes can overlap and the same phenotype can be cross shared in different disorders Therefore accurate diagnosis and effective management are challenging Over the last decade advances in genomics and sequencing platforms have accelerated the understanding of how candidate genes contribute to the development of immunological disorders Significant progress has been made in discovering disease causing genes for rare monogenic immunological disorders especially in immunodeficiency syndrome These findings shed insights into disease mechanisms and facilitated the identification of new biomarkers that can help in diagnosis prognosis and development of novel clinical therapeutic approaches
