

Chapter 1: Intro

What is a function?

What is a function?

A function is a rule that assigns to each element x in a set X a unique element y in a set Y . The set X is called the domain of the function and the set Y is called the codomain of the function.

For example, the function $f(x) = x^2$ maps each real number x to its square x^2 . The domain of f is the set of real numbers $\mathbb{R}$ and the codomain of f is the set of non-negative real numbers $\mathbb{R}^+$.

Not all functions are linear. For example, the function $f(x) = x^2$ is a non-linear function. The graph of f is a parabola opening upwards with its vertex at the origin $(0,0)$.
