Spacecraft Propulsion Charles D. Brown, 1996 **Introduction to Rocket Propulsion for Astronautics** Dora Musielak, 2025-04-29 This book discusses the basic principles performance and technologies unique to the propulsion systems that power space vehicles It is intended as a stimulating and accessible way in to the subject aiming for a clear understanding of basic principles providing a description of propulsion key physical mechanisms and emphasizing the current state of technologies for the different applications such as launch vehicles and space probes The seven chapters comprise the wide scope of space rocket propulsion filtered to highlight the main ideas without sacrificing the most important results

Future Spacecraft Propulsion Systems Paul A. Czysz, Claudio Bruno, 2006-09-19 In Future Spacecraft Propulsion Systems the authors demonstrate the need to break free from the old established concepts of expendable rockets using chemical propulsion and to develop new breeds of launch vehicle capable of both launching payloads into orbit at dramatically reduced cost and for sustained operations in low Earth orbit The next steps they explain to establishing a permanent presence in the solar system beyond Earth are the commercialisation of sustained operations on the Moon and the development of advanced nuclear or high energy space propulsion systems for solar system exploration out to the boundary of interstellar space In the future high energy particle research facilities may one day yield a very high energy propulsion system that will take us to the nearby stars or even beyond This is a timely and comprehensive book putting spacecraft propulsion systems in perspective

Future Spacecraft Propulsion Systems and Integration Paul A. Czysz, Claudio Bruno, Bernd Chudoba, 2017-08-30 The updated and expanded third edition of this book focuses on the multi disciplinary coupling between flight vehicle hardware alternatives and enabling propulsion systems It discusses how to match near term and far term aerospace vehicles to missions and provides a comprehensive overview of the subject directly contributing to the next generation space infrastructure from space tourism to space exploration This holistic treatment defines a mission portfolio addressing near term to long term space transportation needs covering sub orbital orbital and escape flight profiles In this context a vehicle configuration classification is introduced covering alternatives starting from the dawn of space access A best practice parametric sizing approach is introduced to correctly design the flight vehicle for the mission This technique balances required mission with the available vehicle solution space and is an essential capability sought after by technology forecasters and strategic planners alike
