Polymerase Chain Reaction

Synopsis

In the Polymerase Chain Reaction (PCR) simulation, you will see through eight steps another reaction, similar to the one that takes place, to investigate the crime, understand how it took place, the subject stated against it, the facts that the investigator had to deal with their case.

Design and

After sampling, you will go to the next section, investigate the sample of DNA you collected. By using a mixture of thermocycling, you can see the PCR from the crime scene. It is up to you to see that correct sample accurately the PCR experiment.

See the structure of DNA sample replication as it is.

In the simulation, you will see the PCR experiment on the computer, which illustrates the structure of DNA and the replication of the template with the correct information. The experimental process, as well as all specifications of the PCR, is shown.

Identify the samples

In the PCR simulation, you will collect your samples and other samples collected from the laboratory, and you will then compare the polymerase chain reaction with the PCR results. The structure of the PCR is shown.

Learning Objectives

In the PCR simulation, you will see the results:

1. Identify the structure of the polymerase chain reaction and the PCR.
2. Identify the PCR results using the PCR results as the PCR results.
