Evaluation of the Pondpack Software for Urban Drainage Design to Meet the Urban Stormwater Management Manual for Malaysia (MASMA) Requirement Husna binti Takaijudin,2008

New urban development area has been recognized as the main national problem when dealing with storm water runoff due to the reduction on pervious area and creating flooding problem The conventional engineering method is not effective because it is insufficient to cater higher amount of runoff discharges from new development area Besides it will create the significant problem such as flooding surcharge and channel system blockage Therefore the natural approach has been incorporated with the conventional to deal with the storm water runoff The storage facilities are integrated in the drainage network design to cater the volume of runoff from new urban development area The dissertation demonstrated the modeling of drainage network and pond system by using the PondPack software within one of project site at Sepang District Selangor Besides the performance of PondPack modeling has been evaluated in order to meet Urban Storm water Management Manual for Malaysia MASMA requirements The optimum design of storage has been achieved using the SCS hydro graph method compared to Modified Rational Method in PondPack Modeling It is verified that the SCS hydro graph method is more suitable in order to meet MASMA requirement Furthermore there are some limitations on model when applying the Modified Rational method Only one node of subarea is intended to assess This circumstance brings significant error especially on computation of time of concentration and storm duration
