The Commercial & Financial Chronicle ... ,1910 *Dark Pools and High Frequency Trading For Dummies* Jay Vaananen,2015-02-23 A plain English guide to high frequency trading and off exchange trading practices In Dark Pools High Frequency Trading For Dummies senior private banker Jukka Vaananen has created an indispensable and friendly guide to what really goes on inside dark pools what rewards you can reap as an investor and how wider stock markets and pricing may be affected by dark pools Written with the classic For Dummies style that has become a hallmark of the brand Vaananen makes this complex material easy to understand with an insider s look into the topic The book takes a detailed look at the pros and the cons of trading in dark pools and how this type of trading differs from more traditional routes It also examines how dark pools are currently regulated and how the regulatory landscape may be changing Learn what types of dark pools exist and how a typical transaction works Discover the rules and regulations for dark pools and some of the downsides to trading Explore how dark pools can benefit investors and banks and who can trade in them Recognize the ins and outs of automated and high frequency trading Because dark pools allow companies to trade stocks anonymously and away from the public exchange they are not subject to the peaks and troughs of the stock market and have only recently begun to take off in a big way Written with investors and finance students in mind Dark Pools High Frequency Trading For Dummies is the ultimate reference guide for anyone looking to understand dark pools and dark liquidity including the different order types and key HFT strategies Computer Vision - ACCV 2014 Workshops C.V. efficient material use AM companies however still face technological challenges such as limited precision due to shrinkage built in stresses and limited process stability and robustness Moreover often post processing is needed due to high roughness and remaining porosity Qualified trained personnel are also in short supply In recent years there have been dramatic improvements in AM design methods process control post processing material properties and material range However if AM is going to gain a significant market share it must be developed into a true precision manufacturing method The production of precision parts relies on three principles Production is robust i e all sensitive parameters can be controlled Production is predictable for example the shrinkage that occurs is acceptable because it can be predicted and compensated in the design Parts are measurable as without metrology accuracy repeatability and quality assurance cannot be known AM of metals is inherently a high energy process with many sensitive and inter related process parameters making it susceptible to thermal distortions defects and process drift The complete modelling of these processes is beyond current computational power and novel methods are needed to practicably predict performance and inform design In addition metal AM produces highly textured surfaces and complex surface features that stretch the limits of contemporary metrology With so many factors to consider there is a significant shortage of background material on how to inject precision into AM processes Shortage in such material is an important barrier for a wider uptake of advanced manufacturing technologies and a comprehensive book is thus needed This book aims to inform the reader how to improve the precision of metal AM processes by tackling the three principles of robustness predictability and metrology and by developing computer aided engineering methods that empower rather than limit AM design Richard Leach is a professor in metrology at the University of Nottingham and heads up the Manufacturing Metrology Team Prior to this position he was at the National Physical Laboratory from 1990 to 2014 His primary love is instrument building from concept to final installation and his current interests are the dimensional measurement of precision and additive manufactured structures His research themes include the measurement of surface topography the development of methods for measuring 3D structures the development of methods for controlling large surfaces to high resolution in industrial applications and the traceability of X ray computed tomography He is a leader of several professional societies and a visiting professor at Loughborough University and the Harbin Institute of Technology Simone Carmignato is a professor in manufacturing engineering at the University of Padua His main research activities are in the areas of precision manufacturing dimensional metrology and industrial computed tomography He is the author of books and hundreds of scientific papers and he is an active member of leading technical and scientific societies He has been chairman organiser and keynote speaker for several international conferences and received national and international awards including the Taylor Medal from CIRP the International Academy for Production Engineering
