Online Collaborative Translation in China and Beyond Chuan Yu, 2022-11-30. In this original and innovative work, Yu boldly tackles the increasingly influential collaborative translation phenomenon with special reference to China. She employs the unique perspective of an ethnographer to explore how citizen translators work together as they select, translate, edit, and polish translations. Her area of particular interest is the burgeoning yet notably distinctive world of the Chinese internet, where the digital media ecology is, with Chinese characteristics. Through her longitudinal digital ethnographic fieldwork in Yeeyan, Cenci, and other online translation platforms, where the source materials usually come from outside China, Yu draws out lessons for the various actors in the collaborative translation space, focusing on their communities, working practices, and identities. For nothing is quite as it seems. She also theorises relationships between the actors, their work, and their places of work, offering us a rich and insightful perspective into the often hidden world of collaborative translation in China. The contribution of Yu's work also lies in her effort in looking beyond China, providing us with a landscape of collaborative translation in practice in training and in theory across geographic contexts. This volume will be of particular interest to scholars and postgraduate students in translation studies and digital media.

Structural Racism Stephen Menendian, 2025-06-30. This book explains how racial inequality in the United States is produced and perpetuated and what should be done about it. It develops the elusive concept of structural racism, presenting a precise definition that is clear and comprehensible, and illustrates how it operates methodically and rigorously. Many other books are long on problems and short on solutions, whereas this book develops the key principles that must ground a structural reform agenda and then presents a broad-ranging set of interventions organized around ten themes that will reduce racial disparities while expanding opportunity for all. Unlike most books on race, which focus on a particular issue or sector, this book is comprehensive in its scope, encompassing the vital systems that shape racial inequality in contemporary American society, from education and public schools to income and wealth disparities, to housing and health care, to policing and the criminal justice system. As such, this book is the ideal text for readers seeking to learn more about structural racial inequality in society, how it came to be that way, and what we should do about it, while deepening our understanding and challenging many misguided or simplistic

prevailing notions In a time of backlash to racial justice and growing doubts about racial equity initiatives this book is a timely and necessary entry A must read for advocates students policymakers and researchers alike **The Brain in Search of Itself** Benjamin Ehrlich,2022-03-15 Passionate and meticulous Ehrlich delivers thought provoking metaphors unforgettable scenes and many beautifully worded phrases Benjamin Labatut The New York Times Book Review One of The Telegraph s best books of the year The first major biography of the Nobel Prize winning scientist who discovered neurons and transformed our understanding of the human mind illustrated with his extraordinary anatomical drawings Unless you re a neuroscientist Santiago Ram n y Cajal is likely the most important figure in the history of biology you ve never heard of Along with Charles Darwin and Louis Pasteur he ranks among the most brilliant and original biologists of the nineteenth century and his discoveries have done for our understanding of the human brain what the work of Galileo and Sir Isaac Newton did for our conception of the physical universe He was awarded the Nobel Prize in 1906 for his lifelong investigation of the structure of neurons The mysterious butterflies of the soul Cajal called them whose beating of wings may one day reveal to us the secrets of the mind And he produced a dazzling oeuvre of anatomical drawings whose alien beauty grace the pages of medical textbooks and the walls of museums to this day Benjamin Ehrlich s The Brain in Search of Itself is the first major biography in English of this singular figure whose scientific odyssey mirrored the rocky journey of his beloved homeland of Spain into the twentieth century Born into relative poverty in a mountaintop hamlet Cajal was an enterprising and unruly child whose ambitions were both nurtured and thwarted by his father a country doctor with a flinty disposition A portrait of a nation as well a biography The Brain in Search of Itself follows Cajal from the hinterlands to Barcelona and Madrid where he became an illustrious figure resisting and ultimately transforming the rigid hierarchies and underdeveloped science that surrounded him To momentous effect Cajal devised a theory that was as controversial in his own time as it is universal in ours that the nervous system is comprised of individual cells with distinctive roles just like any other organ in the body In one of the greatest scientific rivalries in history he argued his case against Camillo Golgi and prevailed In our age of neuro imaging and investigations into the neural basis of the mind Cajal is the artistic and scientific forefather we must get to know The Brain in Search of Itself is at once the story of how the brain as we know it came into being and a finely wrought portrait of an individual as fantastical and complex as the subject to which he devoted his life **Learning That Sticks**

The Public Mind and the Politics of Postmillennial U.S.-American Writing Jolene Mathieson, Marius Henderson, Julia Lange, 2022-08-22 In the last twenty years how has U S American writing and the reading public responded to the complexity of an American culture resolutely situated in a larger highly politicized globalized world undergoing radical change The 20th century modes of realism and postmodernism have been succeeded by writerly practices that are that are invested in the idea of embodied authenticity and that are relatable to neorealism whether it be via outright affirmation or critical experimentation and appropriation The individual case studies mark the ways in which postmillennial U S American writing is marked by an ongoing awareness toward complexity and the entanglement of writers and the reading public with pressing political concerns and at times oppressive social and economic discursive and structural formations These contributions further attest to how narrative and structural complexity grammatical and lexical sophistication and social nuance endure as the main literary modes of confronting 21st century political life This volume is thus of interest for both the study of U S American political culture and U S American literature

Biologies Maurizio Meloni, 2019-01-10 During the twentieth century genes were considered the controlling force of life processes and the transfer of DNA the definitive explanation for biological heredity Such views shaped the politics of human heredity in the eugenic era controlling heredity meant intervening in the distribution of good and bad genes However since the turn of the twenty first century this centrality of genes has been challenged by a number of postgenomic disciplines The rise of epigenetics in particular signals a shift from notions of biological fixedness to ideas of plasticity and impressionability of biological material This book investigates a long history of the beliefs about the plasticity of human biology starting with ancient medicine and analyses the biopolitical techniques required to govern such permeability It looks at the emergence of the modern body of biomedicine as a necessary displacement or possibly reconfiguration of earlier plastic views Finally it analyses the returning of plasticity to contemporary postgenomic views and argues that postgenomic plasticity is neither a modernistic plasticity of instrumental management of the body nor a postmodernist celebration of potentialities It is instead a

plasticity that disrupts clear boundaries between openness and determination individual and community with important implications for notions of risk responsibility and intervention *Teaching Academic L2 Writing* Eli Hinkel,2020-07-30 The new edition of this comprehensive text fills an important role in teacher professional preparation by focusing on how to teach the grammar and vocabulary that are essential for all L2 writing teachers and student writers Before L2 writers can begin to successfully produce academic prose they need to understand the foundations of the language and develop the language tools that will help them build reasonable quality text Targeting specific problem areas of students writing this text offers a wealth of techniques for teaching writing grammar and vocabulary to second language learners Updated with current research and recent corpus analysis findings the second edition features a wealth of new materials including new teaching activities student exercises and assignments and substantially revised appendices with supplementary word and phrase lists and sentence components Designed for preservice ESL ELT TESOL courses as well as Academic Writing and Applied Linguistics courses this book includes new contextualized examples in a more accessible and easy to digest format **Labs of Our Own** Sig / Sara Giordano,2025-02-11 From climate change to COVID 19 to reproductive justice there has been deep political polarization around science Labs of Our Own provides a unique entry point into these twenty first century science wars by focusing on our affective relationships to science The book delves into various sites where scientists teachers artists and activists claim to create more democratic access to science from DIY biology community labs to feminist classrooms to activist science practitioners The reader will find that these claims for and attempts at democratic sciences not only impact what counts as science and who counts as a scientist but reconfigure who is included in the proper public Instead of arguing for a knee jerk defense of science against right wing attacks Labs of Our Own builds the case for a feminist antiracist decolonial queer science tinkering practice that intentionally politically and ethically acts to produce new challenges to the definition and boundaries of the human
