How to Perform a Systematic Literature Review Edward Purssell, Niall McCrae, 2024-12-11. This new edition is an authoritative and accessible textbook to an activity that is often found overwhelming. The systematic review is a rigorous method of collating and synthesizing evidence from multiple studies producing a whole greater than the sum of parts. The authors steer readers on a logical path through the process, taking account of the different needs of researchers, students, and practitioners in health and social care. Practical guidance is provided on the fundamentals of systematic reviewing and also on advanced techniques such as meta-analysis. Examples are given throughout with a succinct glossary to support the text. This new edition updates the first edition by considering a range of new and emerging issues in the systematic review process. In particular, the need for evidence to be systematically appraised in a timely manner, particularly during public health emergencies and when urgent patient care issues are being considered. The balance between speed and comprehensiveness. New and developing areas of interest such as living reviews and rapid reviews, both of which increased during Covid-19. Advances in methodologies and in particular meta-analysis methods. The introduction of AI and other automated processes of data management. This up-to-date accessible textbook will satisfy the needs of students, practitioners, and educators in the sphere of health and social care. The authors will advise some freely available or inexpensive open source access resources such as PubMed R and Zotero to help students how to perform a systemic review and to see how this informs the guideline and decision making process.
