It presents the scientific inquiries and outcomes showcased at the 15th Days of the Bosnian Herzegovinian American Academy of Arts and Sciences conference held in Sarajevo, Bosnia and Herzegovina, from June 20 to 23, 2024. The collection highlights the latest advancements and will draw the interest of researchers in diverse domains of engineering, including civil engineering, data science, and geographic information systems, computer science, and artificial intelligence, advanced environmental engineering, and project management information and communication technologies, and advanced electrical power systems. This book serves as a testament to the ongoing pursuit of knowledge and innovation in these fields, offering insights into the current research landscape and future directions. The contributions not only expand the theoretical foundations but also explore practical applications that address contemporary challenges in technology and engineering. The editors gratefully acknowledge the dedicated efforts of all the symposia chairs of the 15th Days of BHAAAS, whose meticulous planning and scholarly oversight have enriched this book and contributed to its scholarly significance.      Grid Computing: The New

Frontier of High Performance Computing Lucio Grandinetti, 2005-11-15 The book deals with the most recent technology of distributed computing. As the Internet continues to grow and provide practical connectivity between users of computers, it has become possible to consider use of computing resources which are far apart and connected by Wide Area Networks. Instead of using only local computing power, it has become practical to access computing resources widely distributed. In some cases, between different countries; in other cases, between different continents. This idea of using computer power is similar to the well-known electric power utility technology. Hence, the name of this distributed computing technology is the Grid Computing. Initially, grid computing was used by technologically advanced scientific users. They used grid computing to experiment with large-scale problems which required high-performance computing facilities and collaborative work. In the next stage of development, the grid computing technology has become effective and economically attractive for large and medium-size commercial companies. It is expected that eventually the grid computing style of providing computing power will become universal, reaching every user in industry and business. Written by academic and industrial experts who have developed or used grid computing. Many proposed solutions have been tested in real-life applications. Covers most essential and technically relevant issues in grid computing.      **The PostgreSQL Reference Manual** PostgreSQL global development group, 2007
