Practice Martin Lipscomb,2015-07-30 Despite sustained debate and progress the evolving thing that is evidence based nursing or practice EBP continues to dangle a variety of conceptual and practical loose threads Moreover when we think about what is being asked of students and registered or licenced practitioners in terms of EBP it is difficult not to concede that this ask is in many instances quite large and occasionally it may be unachievable EBP has and continues to improve patient client and user care Yet significant questions concerning its most basic elements remain unresolved and if nurses are to contribute to the resolution or reconfiguration of these questions then as a first step we must acknowledge their existence From a range of international standpoints and perspectives contributors to this book focus on aspects of EBP that require development This focus is always robust and at times it is unashamedly provocative Contributors challenge readers to engage with anomalies that surround the subject and readers are asked to consider the often precarious assumptions that underpin key aspects of EBP While both conflict and concord are evident among the various offerings presented here the book nonetheless creates and sustains a narrative that is bigger or more substantial than the sum of individual parts And across contributions a self assuredly critical stance towards EBP as currently practiced conceptualized and taught coexists alongside respectful admiration for all who make it happen Exploring Evidence based Practice Debates and Challenges in Nursing should be considered essential reading for academics and postgraduate students with an interest in evidence based practice and nursing research

Astronomy Communication Andre Heck,C. Madsen,2013-03-14

Astronomy has always been one of the easiest of the sciences to convey to the public That is partly because it produces spectacular pictures that can be explained at least in part and admired partly because understanding of astronomy usually does not depend upon a knowledge of a complex classification system or esoteric terminology and partly because its extremes in distances and times challenge our imagination and philosophies Most scientists enjoy sharing with others the discoveries made by themselves and their colleagues The primary purpose of scientific research is to discover to learn and to understand When we succeed we enjoy sharing that understanding Education is most pleasurable when our audience wishes to learn and we have something important to convey A field that does not communicate effectively with the public soon loses its interest and support Author Andre Heck explains the many different ways in which professional communication now occurs while Leslie Sage explains how such communication should be done Astronomy done with spacecraft and large equipment is very expensive and the funds for those ultimately come from the public The cost of astronomy prorated over the number of research astronomers is perhaps the highest in all the sciences If astronomers do not share their results with the public they will lose its support However for most astronomers the desire to share and educate dominates over the pragmatic need to win public support With the advent of new communication techniques television videos CDs DVDs animation simulations we have new methods to communicate in addition to the conventional ones of the printed and spoken word Railway Age ,1919
