bibliometric analysis was then conducted on the inventory which revealed intensive publishing activity and strong collaboration across the region however publishing in predatory journals and difficulty in locating grey literature on online sources were areas where further work is needed to ensure research produced in the area reaches a wide audience A detailed analysis of research published by authors affiliated to Senegalese institutions was conducted which revealed a significant gender imbalance of authors only 13 percent of authors identified in the study were female Recommendations included in this report are to expand the inventory and analysis to other CECAF member countries and to take steps to ensure the grey literature produced by authors from the CECAF region is indexed by online sources

**Numerical Correlation between Impact Factor and Web Ranking of Electronic Scientific Journals Using Regression Analysis** Giorgos Kouropoulos, Γιώργος Κουρόπουλος, 2017-12-15 The present study attempts to examine the numerical correlation between web ranking of electronic scientific journals and impact factor of these journals using the method of regression analysis Regression analysis allows the option of investigating and predicting the numerical relationship between website ranking of scientific journals on the World Wide Web and the value of impact factor of the journals A sample of 57 publishers with 6 272 scientific journals and 50 standalone scientific journals was analyzed during research procedure In this study two different indicators about websites classification on World Wide Web were examined separately for 57 publishers and 50 standalone journals Alexa rank and Statscrop rank The electronic databases through the internet constitute the main information resources of this study about the impact factors The general conclusion that arises is that the impact factor of electronic

scientific journals illustrates a very strong positive correlation with classification of websites on the World Wide Web Furthermore it is concluded that the change of web ranking as a function of impact factor is governed by a Gaussian function or rational function with lower Pearson coefficient and presents non linearly correlation Even if there is very strong correlation between impact factor and web rank for electronic journals the prediction of impact factor from web rank is not possible and presents many divergences
