**Christian Logic** Stephen Wuest, 2024-10-25 This text is about fusing logic and moral theory and is definitely from a Christian worldview. It is written on a level for AP high school or at most second year college use. But the text is for Christian laypeople. The goals of this book include presenting modern deductive logic, modern logical notation and the twenty rules of inference. These describe what modern deductive logic is. However, orthodox Christians must go further; they must be exposed to historical moral ethical models. And they must think carefully about how to integrate Christian morality into modern logic and use this fusion to have a sound methodology to analyze modern arguments. Given the popularity of logically incoherent conspiracy theories, this approach to formal logic enters through the door of what historical Christians would call roughly our shared reality. Also, given the abundance of partial or invalid or unsound arguments that Americans encounter, the analysis of arguments in this book will heavily deal with dysfunctional arguments. Putting these topics together in a synthesized way in a Christian worldview results in a product that reasons across disciplines and is perhaps politically incorrect. But the author is convinced that this combination of skills is what American Christians need. **Pitch the Perfect Investment**

**A Perfect Babel of Confusion** Randall Herbert Balmer,2002 Examining the interaction of the Dutch and the English in colonial New York and New Jersey this study charts the decline of European culture in North America Balmer argues that the combination of political intrigue English cultural imperialism and internal socio economic tensions eventually drove the Dutch away from their hereditary customs language and culture He shows how this process which played itself out most visibly and poignantly in the Dutch Reformed Church between 1664 and the American Revolution illustrates the difficulty of maintaining non English cultures and institutions in an increasingly English world A Perfect Babel of Confusion redresses some of the historiographical neglect of the Middle Colonies and in the process sheds new light on Dutch colonial culture

Toward a More Perfect Union Charles E. Rankin,2023-05

Toward a More Perfect Union is an extraordinary book of husband and wife letters written during the Civil War selected from the Frederic E Lockley Collection at the Huntington Library in San Marino California Appearing here are 162 letters exchanged between Frederic Lockley and his wife Elizabeth chosen from 405 letters preserved in the collection The survival of such two way exchanges is rare Few soldiers in the field had the opportunity to save letters from home The Lockleys selected letters narrate a chronological three year story from 1862 to 1865 When Frederic enlisted at thirty seven he and Elizabeth promised each other they would write twice a week and for the most part they did These are not average letters A

published author Frederic was remarkably insightful and articulate and Elizabeth was literate and expressive as well. Although primarily a love story set during the Civil War, *Toward a More Perfect Union* also offers ample military material, some not well represented elsewhere in Civil War literature. Frederic wrote of life in garrison duty in defense of Washington, manning the siege lines at Petersburg, and guarding Union parolees and Confederate prisoners of war. But his letters also show strong ties to home and his need for those ties in order to maintain his own mental and emotional equilibrium in the face of the horrors of war. Elizabeth's letters reflect an urban setting and the perspective of a young, recently married woman who spent much of her time parenting three young children from Frederic's first marriage. In fact, children and parenting assume a theme in Fred and Lizzie's correspondence almost as constant and consequential as the war itself. Providing background and framework for these exceptional letters, editor Charles E. Rankin's introduction and contextualization create a continuous narrative that allows readers to follow these correspondents through a time critical to their marriage and to our nation's history.

*The Theory of Perfect Learning* Nonvikan Karl-Augustt Alahassa, 2021-08-17

The perfect learning exists. We mean a learning model that can be generalized and moreover that can always fit perfectly the test data as well as the training data. We have performed in this thesis many experiments that validate this concept in many ways. The tools are given through the chapters that contain our developments. The classical Multilayer Feedforward model has been reconsidered and a novel  $N_k$  architecture is proposed to fit any multivariate regression task. This model can easily be augmented to thousands of possible layers without loss of predictive power and has the potential to overcome our difficulties simultaneously in building a model that has a good fit on the test data and doesn't overfit. Its hyperparameters: the learning rate, the batch size, the number of training times, epochs, the size of each layer, the number of hidden layers, all can be chosen experimentally with cross-validation methods. There is a great advantage to build a more powerful model using mixture models' properties. They can self-classify many high-dimensional data in a few numbers of mixture components. This is also the case of the Shallow Gibbs Network model that we built as a Random Gibbs Network Forest to reach the performance of the Multilayer feedforward Neural Network in a few numbers of parameters and fewer backpropagation iterations. To make it happen, we propose a novel optimization framework for our Bayesian Shallow Network called the Double Backpropagation Scheme (DBS) that can also fit perfectly the data with appropriate learning rate and which is convergent and universally applicable to any Bayesian neural network problem. The contribution of this model is broad. First, it integrates all the advantages of the Potts Model, which is a very rich random partitions model that we have also modified to propose its Complete Shrinkage version using agglomerative clustering techniques. The model takes also an advantage of Gibbs Fields for its weights' precision matrix structure, mainly through Markov Random Fields, and even has five variants: structures at the end, the Full Gibbs, the Sparse Gibbs, the Between-layer Sparse Gibbs, which is the B-Sparse Gibbs, in a short, the Compound Symmetry Gibbs (CS Gibbs), in short, and the Sparse Compound Symmetry Gibbs (Sparse CS Gibbs) model. The Full Gibbs is mainly to remind fully connected

models and the other structures are useful to show how the model can be reduced in terms of complexity with sparsity and parsimony. All those models have been experimented and the results arouse interest in those structures in a sense that different structures help to reach different results in terms of Mean Squared Error (MSE) and Relative Root Mean Squared Error (RRMSE). For the Shallow Gibbs Network model we have found the perfect learning framework: it is the  $l_1$  norm, the DBS configuration which is a combination of the Universal Approximation Theorem and the DBS optimization coupled with the distance Nearest Neighbor, the Taylor Series, Perfect Multivariate Interpolation, distance Nearest Neighbor, Taylor Series, PMI model which in turn is a combination of the research of the Nearest Neighborhood for a good Train-Test association, the Taylor Approximation Theorem and finally the Multivariate Interpolation Method. It indicates that with an appropriate number  $l_1$  of neurons on the hidden layer, an optimal number  $\zeta$  of DBS updates, an optimal DBS learning rate  $\epsilon_{DBS}$ , an optimal distance  $d_{opt}$  in the research of the nearest neighbor in the training dataset for each test data  $x_i$ , an optimal order  $h_{opt}$  of the Taylor approximation for the Perfect Multivariate Interpolation, distance Nearest Neighbor, Taylor Series, PMI model, once the DBS has overfitted the training dataset, the train and the test error converge to zero. As the Potts Models and many random Partitions are based on a similarity measure, we open the door to find sufficient invariants, descriptors in any recognition problem for complex objects such as image using metric learning and invariance descriptor tools to always reach 100 % accuracy. This is also possible with invariant networks that are also universal approximators. Our work closes the gap between the theory and the practice in artificial intelligence in a sense that it confirms that it is possible to learn with very small error allowed.
