firms like Google and Facebook

*The Immaculate Conception of Data* peeks behind the secretive legal agreements surrounding agricultural big data to trace how it is used and with what consequences. Agribusinesses are among the oldest oligopoly corporations in the world and their concentration gives them an advantage over other food system actors. Kelly Bronson explores what happens when big data get caught up in pre-existing arrangements of power. Her richly ethnographic account details the work of corporate scientists, farmers using the data, and activist hackers building open source data platforms. Actors working in private and public contexts have divergent views on whom new technology is for, how it should be developed, and what kinds of agriculture it should support. Surprisingly, despite their differences, these groups share a way of speaking about data and its value for the future. Bronson calls this the immaculate conception of data, arguing that this phenomenon is a dangerous framework for imagining big data and what it might do for society. Drawing our attention to agriculture as an important new site for big tech criticism, *The Immaculate Conception of Data* uniquely bridges science and technology studies, critical data studies, and food studies, bringing to light salient issues related to data justice and a sustainable food system.

*Regenerating Cities* Maria Elena Zingoni de Baro, 2022-01-18 This book sets out the discussion on how cities can contribute solutions to some of the challenges the urbanised world is facing, such as the pressure of growing populations, mitigation of effects of, and adaptation to, globally changing environmental climate and public health conditions. Presenting a detailed explanation of the causes behind the current state of modern cities, the book advocates for a paradigm shift to improve the quality of life of ever-increasing urban inhabitants whilst nourishing the natural systems that sustain human and non-human life on the planet. Recognising the precious role that nature plays in the functioning of cities, it delves into the study of biophilic design and regenerative development. The book argues that these social ecological design approaches can act as catalysts to develop conditions in urban settings that are beneficial for natural and human systems to thrive and flourish, both in ecosystem services and social cultural systems. This is particularly relevant for the design of new quality precincts or the regeneration of degraded urban spaces to promote health, wellbeing, and urban resilience. A framework is proposed to guide the process of thinking about designing and building healthier, more liveable and resilient urban environments that raise the quality of life in cities. The method can be used by researchers, practitioners, urban designers, urban planners, architects, and landscape architects interested in developing their work within a social ecological perspective. It can also be used by local governments and agencies to underpin policy making, and by educational institutions to prepare graduates with necessary skills to respond to current and future built environment challenges.

**Design for Sustainability** Janis Birkeland, 2012-05-04 With radical and innovative design solutions, everyone could be living in buildings and settlements that are more like gardens than cargo containers, and that purify air and water, generate energy, treat sewage, and produce food at lower cost. Birkeland introduces systems design thinking that cuts across academic and professional boundaries and the divide between social and physical sciences to move

towards a transdisciplinary approach to environmental and social problem solving This sourcebook is useful for teaching as each topic within the field of environmental management and social change has pairs of short readings providing diverse perspectives to compare contrast and debate Design for Sustainability presents examples of integrated systems design based on ecological principles and concepts and drawn from the foremost designers in the fields of industrial design materials housing design urban planning and transport landscape and permaculture and energy and resource management

*Positive Development* Janis Birkeland, 2012-05-16 Janis Birkeland presents the innovative new paradigm of Positive Development in which the built environment provides greater life quality health amenity and safety for all without sacrificing resources or money With a different form of design development itself can become a sustainability solution A cornerstone of this new paradigm is the eco retrofitting of the vast urban fabric we already inhabit The author presents a revolutionary new tool called SmartMode to achieve this end This book challenges everyone working in or studying the areas of sustainable development planning architecture or the built environment to rethink their current ideas and practices

*Towards a Just and Ecologically Sustainable Peace* Joseph Camilleri, Deborah Guess, 2020-08-13 This book addresses the need to develop a holistic approach to countering violence that integrates notions of peace justice and care of the Earth It is unique in that it does not stop with the move toward articulating Just Peace as a human concern but probes the mindset needed for the shift to a Just and Ecologically Sustainable Peace It explores the values and principles that can guide this shift theoretically and in practice International in scope and grounded in the reality of Indigenous and non Indigenous Australia and the wider Asia Pacific context the book brings together important insights drawn from the Indigenous relationship to land ecological feminism ecological philosophy the social sciences more generally and a range of religious and non religious cosmologies Drawn from diverse disciplinary backgrounds the contributors in this book apply their combined professional expertise and active engagement to illuminate the difficult choices that lie ahead
