The Wiley-Blackwell Encyclopedia of Urban and Regional Studies Anthony M. Orum, 2019-04-15 Provides comprehensive coverage of major topics in urban and regional studies. Under the guidance of Editor in Chief Anthony Orum, this definitive reference work covers central and emergent topics in the field through an examination of urban and regional conditions and variation across the world. It also provides authoritative entries on the main conceptual tools used by anthropologists, sociologists, geographers, and political scientists in the study of cities and regions. Among such concepts are those of place and space, geographical regions, the nature of power and politics in cities, urban culture, and many others. *The Wiley Blackwell Encyclopedia of Urban and Regional Studies* captures the character of complex urban and regional dynamics across the globe, including timely entries on Latin America, Africa, India, and China. At the same time, it contains illuminating entries on some of the current concepts that seek to grasp the essence of the global world today, such as those of Friedmann and Sassen on global cities. It also includes discussions of recent economic writings on cities and regions, such as those of Richard Florida. Comprised of over 450 entries on the most important topics and from a range of theoretical perspectives, *Features* authoritative entries on topics ranging from gender and the city to biographical profiles of figures like Frank Lloyd Wright. Takes a global perspective with entries providing coverage of Latin America and Africa, India, and China, and the US and Europe. Includes biographies of central figures in urban and regional studies, such as Doreen Massey, Peter Hall, Neil Smith, and Henri Lefebvre. *The Wiley Blackwell Encyclopedia of Urban and Regional Studies* is an indispensable reference for students and researchers in urban and regional studies, urban sociology, urban geography, and urban anthropology.

Critical Reflections on Cities in Southeast Asia Tim Bunnell, Lisa Drummond, Ho, 2021-11-15 *Critical Reflections* draws together the multi-disciplinary research of scholars working in on cities across Southeast Asia. The fourteen essays collected in the volume are organised into three thematic sections: re-conceptualisation, competition, and intervention. Collectively, these reflections contribute to and interrogate the expanding urban and regional studies literature. The volume constitutes a critical corrective to the existing literature, which all too often seeks to diagnose contemporary urban trends everywhere from a small number of mostly Western paradigmatic cases. Yet, while acknowledging the increasing interconnectedness and shared global orientation of most cities in Southeast Asia, the volume is wary of positing an equally generalising regional model. Individually, these essays attend to the diversity of contemporary urban experiences in Southeast Asia.

The Power of Cities in International Relations Simon Curtis, 2014-04-16 Cities have become increasingly important to global politics but have largely occupied a peripheral place in the academic study of International Relations IR This is a notable oversight for the discipline although one which may be explained by IR s traditional state centrism the subjugation of the city to the demands of the territorial state in the modern period and a lack of conceptual and analytical frameworks that can allow scholars to include the impact of cities within their work Presenting case specific scholarship from leading experts in the field each contribution guides the reader through the changing nature of cities in the international system and their increasing prominence in global governance outcomes The book features case studies on the financial power of cities city action in the security domain collaboration of cities in coping with environmental problems transnational urban regions and mayors as international actors to illustrate if the relationship between the city and the state has changed in profound ways and how cities are empowered by structural changes in world politics The multidisciplinary and global focus in The Power of Cities in International Relations sheds much needed light on the significance of the reemergence of cities from the long shadow of the nation state Only by examining the mechanisms that have empowered cities in the last few

decades can we understand their new functions and capabilities in global politics

Critique of Urbanization Neil Brenner, 2016-12-05 Urbanization is transforming the planet within and beyond cities at all spatial scales In this book Neil Brenner mobilizes the tools of critical urban theory to deconstruct some of the dominant urban discourses of our time which naturalize and thus depoliticize the enclosures exclusions injustices and irrationalities of neoliberal urbanism In so doing Brenner advocates a constant reinvention of the framing categories methods and assumptions of critical urban theory in relation to the rapidly mutating geographies of capitalist urbanization Only a theory that is dynamic which is constantly being transformed in relation to the restlessly evolving social worlds and territorial landscapes it aspires to grasp can be a genuinely critical theory

The Environmental Advantages of Cities William B. Meyer, 2013-03-15 An analysis that offers evidence to challenge the widely held assumption that urbanization and environmental quality are necessarily at odds Conventional wisdom about the environmental impact of cities holds that urbanization and environmental quality are necessarily at odds Cities are seen to be sites of ecological disruption consuming a disproportionate share of natural resources producing high levels of pollution and concentrating harmful emissions precisely where the population is most concentrated Cities appear to be particularly vulnerable to natural disasters to be inherently at risk from outbreaks of infectious diseases and even to offer dysfunctional and unnatural settings for human life In this book William Meyer tests these widely held beliefs against the evidence Borrowing some useful terminology from the public health literature Meyer weighs instances of urban penalty against those of urban advantage He finds that many supposed urban environmental penalties are illusory based on commonsense preconceptions and not on solid evidence In fact greater degrees of urbanness often offer advantages rather than penalties The characteristic compactness of cities for example lessens the pressure on ecological systems and enables resource consumption to be more efficient On the whole Meyer reports cities offer greater safety from environmental hazards geophysical technological and biological than more dispersed settlement does In fact the city defining characteristics widely supposed to result in environmental penalties do much to account for cities environmental

advantages As of 2008 according to U N statistics more people live in cities than in rural areas Meyer s analysis clarifies the effects of such a profound shift covering a full range of environmental issues in urban settings Sport Tourism Heather J. Gibson,2013-09-13 The study of sport tourism is on the cusp of moving from a descriptive phase of research into an analytical phase Consequently many academics and graduate students are searching for theories upon which to ground their work This book draws upon theories and concepts from sociology and anthropology the socio cultural perspective sport and tourism studies and business studies One of the dangers of a new area of study is that the body of knowledge is built on a range of seemingly unrelated studies By grounding work in a theoretical perspective future work can be linked to and contribute to building a cohesive understanding of various aspects of sport tourism This book is an edited collection written by some of the top scholars working in a particular domain throughout the world providing a compendium of theories and concepts that can be used to frame research on various aspects of sport tourism This volume was previously published as a special issue of the journal Sport in Society *African Cities* Professor Garth Myers,2011-04-14 In this groundbreaking book Garth Myers uses African urban concepts and experiences to speak back to theoretical and practical concerns He argues for a re visioning a seeing again and a revising of how cities in Africa are discussed and written about in both urban studies and African studies Cities in Africa are still either ignored banished to a different other lesser category of not quite cities or held up as examples of all that can go wrong with urbanism in much of the mainstream and even critical urban literature Myers instead encourages African studies and urban studies scholars across the world to engage with the vibrancy and complexity of African cities with fresh eyes Touching on a diverse range of cities across Africa from Zanzibar to Nairobi Cape Town to Mogadishu Kinshasa to Dakar the book uses the author s own research and a close reading of works by other scholars writers and artists to help illuminate what is happening in and across the region s cities Cities Demanding the Earth Peter J Taylor,Geoff O'Brien,Phil O'Keefe,2020-03-25 This urgent book brings our cities to the fore in understanding the human input into climate change The demands we are making on nature by living in cities has reached a crisis point and unless we make significant changes to address it the prognosis is terminal consumption Providing a radical new argument that integrates global understandings of making nature and making cities the authors move beyond current policies of mitigation and adaption and pose the challenge of urban stewardship to tackle the crisis Their new way of thinking re orients possibilities for environmental policy and calls for us to reinvent our cities as spaces for activism **Urban Mobility Research in India** M.
