**Abstract:** *Staphylococcus aureus* is a leading cause of nosocomial infection and resistance to infection control measures is increasing. The purpose of this study was to determine the prevalence of *S. aureus* in the hospital environment and to identify risk factors for colonization. A total of 100 samples were collected from the hospital environment and 100 patients. The results showed that 100% of the samples were positive for *S. aureus*. The prevalence of *S. aureus* in the hospital environment was 100% and in patients was 100%. The results also showed that the prevalence of *S. aureus* in the hospital environment was significantly higher than in patients ( $p < 0.05$ ). The results of this study suggest that the hospital environment is a major source of *S. aureus* colonization.
