Rausser, Johan Swinnen, Pinhas Zusman, 2011-09-30 This book analyzes the links between political economics governance structures and the distribution of political power in economic policy making The book theoretically explains and empirically quantifies these interactions The analysis includes both public good policies and redistributive policies Part I of the book presents the conceptual foundations of political economic bargaining and interest group analysis After presenting the underlying theory Part II of the book examines ideology prescription and political power coefficients Part III analyzes a number of specific structures and Part IV presents a framework for political econometrics with a number of empirical applications and testable hypotheses In all four parts of the book four analytical dimensions of public policy are distinguished governance structures political economy mechanism design and incidence **Who Speaks for Nature?** Todd A. Eisenstadt, Karleen Jones West, 2019-03-14 Using the first national survey in Ecuador featuring an oversample of Amazon indigenous communities this path breaking book argues that how vulnerable or exposed people have been to environmental degradation determines how strongly they feel about saving the environment Rather than emphasizing ethnic identity or stakeholders ideological pre dispositions towards environmentalism the authors argue that on the front lines of environmental conservation peoples views are driven by personal experiences of vulnerability Using the survey and hundreds of interviews across Ecuador over three years the authors also argue that the creation of interest groups across ethnic and class lines is more effective in promoting environmental activism than more traditional approaches involving only ethnic or partisan affinity groups *The Nature of Socialist Economics* Peter Murrell, 2014-07-14 What are the sources of the well known differences in the performance of capitalist and socialist economic systems Peter Murrell argues that the Schumpeterian model has far more power to answer this question than does the neoclassical theory generally used for that purpose The neoclassical theory focuses on the absence of a price system and the inability of a centralized system to allocate resources efficiently while the Schumpeterian model emphasizes the rigidity of institutions and policies in socialist economies and their lack of mechanisms either to create new institutions or to identify and to foster the growth of the most efficient organizations including multinational corporations In a work that will have profound consequences for the analysis of economic reform in socialist economies Murrell compares the predictions of these two models against data summarizing foreign trade performance and finds the Schumpeterian model clearly superior Combining international trade theory and econometric techniques the author develops new methods of comparative economic analysis These methods provide new information on the values of eleven resource endowments implicit in trade the degree to which the socialist countries fit standard models of trade the effect of multinational corporations on trade and myriad other features of economic performance Originally published in 1990 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in

The Nature of the Japanese State Brian J. McVeigh, 2013-09-13 Brian J McVeigh uses a unique anthropological approach to step outside flawed stereotypes of Japanese society and really engage in the current debate over the role of bureaucracy in Japanese politics To many in the West Japan appears as a paradox a rational high tech economic superpower and yet at the same time a deeply ritualistic and ceremonial society This adventurous new study demonstrates how these nominally conflicting impressions of Japan can be reconciled and a greater understanding of the state achieved

The Systemic Nature of the Economic Crisis Arturo Hermann, 2015-03-27 The most prominent aspect of the current financial crisis is its systemic character which manifests itself in high levels of inequality rampant unemployment economic and social insecurity and environmental decay This book explores the potential of a pluralistic and interdisciplinary approach for a deeper understanding of the manifold aspects of the economic crisis This book examines the potential of a number of contributions from heterodox economics and psychoanalysis in providing a deeper understanding of these problems The book analyses some of the most debated aspects of the concepts of market democracy and socialism and explores the role of structural ties between economic social and psychological aspects of collective life It also addresses the main economic aspects of the crisis and pays particular attention to a number of structural imbalances and to the psychological interpretation of these phenomena By drawing together approaches from heterodox economics and psychoanalysis this book adopts a pluralist and interdisciplinary approach to the study of these phenomena and manages to overcome the fragmentation so often present in social sciences

Sponsoring Nature Maano Ramutsindela, Marja Spierenburg, Harry Wels, 2013-11-05 Saving the world's flora and fauna especially high profile examples such as chimpanzees whales and the tropical rain forests is big business Individuals and companies channel their resources to the preservation of nature through various ways one of which is the funding of environmental non governmental organizations ENGOs and community based organizations CBOs This book is the first to comprehensively address this issue and focus on a dominant theme in environmental philanthropy the links between ENGOs and CBOs and their sponsors especially the private sector It has been argued that donor support is based on recipient's perceived expertise and needs with no favouritism of flagship environmental organizations as recipients of donor funds A counterview holds that the private sector prefers to fund mainstream ENGOs for environmental research and policy reforms congenial to industrial

capital The authors show that the debate about these arguments together with the empirical evidence on which they are based may shed light on certain aspects of the nature of environmental philanthropy The book evaluates practical examples of environmental philanthropy from Africa and elsewhere against philosophical questions about the material and geographical expressions of philanthropy and the North South connections among philanthropists and ENGOs and CBOs
