Bronson,2020-11-13 Perennials are plants that live for at least 2 consecutive years Technically herbaceous perennials but most gardeners use the term to describe plants Perennials typically bloom during the growing season Summer perennials only live for 2 years while others may live for thousands of years Unlike annuals which last only a single growing season and depend on root growth for continued growth a perennial grows from the root enabling it to bloom through multiple growing seasons There are hundreds of different types of perennials which vary in size from less than 1 inch to 54 inches tall Some perennials feature large colorful blooms while others like ferns and grasses are planted for their texture and foliage Unlike annuals which are planted in the garden directly in the ground in most regions the dormant perennial plants have the ability to become established before the first summer Dormant perennials while they are in the dormant state can survive temperatures down to 25 degrees Fahrenheit 38 degrees Celsius Plant perennials in the summer but don't till with the plants to dry out If you have dormant perennials in the summer water them lightly daily for 2 to 3 weeks Plant perennials in the fall before the first frost Plant
