Perspective Taking: building a neurocognitive framework for integrating the “social” and the “spatial” Klaus Kessler, Sarah H Creem-Regehr, Antonia Hamilton, 2015-06-08

Background Interacting with other people involves spatial awareness of one's own body and the other's body and viewpoint In the past social cognition has focused largely on belief reasoning which is abstracted away from spatial and bodily representations while there is a strong tradition of work on spatial and object representation which does not consider social interactions These two domains have flourished independently A small but growing body of research examines how awareness of space and body relates to the ability to interpret and interact with others This also builds on the growing awareness that many cognitive processes are embodied which could be of relevance for the integration of the social and spatial domains Online mental transformations of spatial representations have been shown to rely on simulated body movements and various aspects of social interaction have been related to the simulation of a conspecific's behaviour within the observer's bodily repertoire Both dimensions of embodied transformations or mappings seem to serve the purpose of establishing alignment between the observer and a target In spatial cognition research the target is spatially defined as a particular viewpoint or frame of reference FOR yet in social interaction research another viewpoint is occupied by another's mind which crucially requires perspective taking in the sense of considering what another person experiences from a different viewpoint Perspective taking has been studied in different ways within developmental psychology cognitive psychology psycholinguistics neuropsychology and cognitive neuroscience over the last few decades yet integrative approaches for channelling all information into a unified account of perspective taking and viewpoint transformations have not been presented so far

Aims This Research Topic aims to bring together the social and the spatial and to highlight findings and methods which can unify research across areas In particular the topic aims to advance our current theories and set the stage for future developments of the field by clarifying and linking theoretical concepts across disciplines

Scope The focus of this Research Topic is on the SPATIAL and the SOCIAL and we anticipate that all submissions will touch on both aspects and will explicitly attempt to bridge conceptual gaps Social questions could include questions of how people judge another person's viewpoint or spatial capacities or how they imagine themselves from different points of view Spatial questions could include consideration of different physical configurations of the body and the arrangement of different viewpoints including mental rotation of objects or viewpoints that have social relevance Questions could also relate to how individual differences in personality sex development culture species etc influence or determine social and spatial perspective judgements Many different methods can be used to explore perspective taking including mental chronometry behavioural tasks EEG MEG and fMRI child development neuropsychological patients

virtual reality and more Bringing together results and approaches from these different domains is a key aim of this Research Topic We welcome submissions of experimental papers reviews and theory papers which cover these topics

Developmental Social Neuroscience and Childhood Brain Insult Vicki Anderson, Miriam H. Beauchamp, 2012-06-20 This book explores the impact of acquired brain injury and developmental disabilities on children's emerging social skills The editors present an innovative framework for understanding how brain processes interact with social development in both typically developing children and clinical populations Anderson Royal Children's Hospital Melbourne *Results from the Second Mathematics Assessment of the National Assessment of Educational Progress* Thomas P. Carpenter, National Council of Teachers of Mathematics, 1981 **Applying Standards-Based Constructivism** Pat Flynn, Paul Vermette, Don

Mesibov, 2013-09-27 This book provides teachers with practical ways of constructing lessons that will engage students and help them develop personal responsibility for their own learning State learning standards and related core curricula require students to demonstrate what they know and understand Students cannot learn to demonstrate their understanding if they sit passively The authors call for constructivist practices which recognize the important role played by standards and student accountability and which also acknowledge the practical need for lecture in an appropriate context This book also shows the links between constructivism and differentiated instruction and other approaches to teaching and learning **How**

Advances in Metacognition and Reflection Igor Bascandziev, Claudia M. Roebbers, Stephanie M. Carlson, Loren Marulis, 2025-03-24 Metacognitive skills thinking about thinking are a form of abstract thought that signify a major advance in cognition in both phylogeny and ontogeny Metacognition is associated with a host of positive outcomes including academic achievement and mental health Although decades of research have led to discoveries about the nature and development of metacognition in school age children newer approaches suggest there are precursor skills in infancy and early childhood Investigators also are turning toward experimental and field based intervention studies to help foster metacognition in the

service of learning and to reduce socioeconomic achievement gaps **Math for All** Linda Schulman Dacey, Karen Gartland, 2009 Embrace the diverse spectrum of abilities interests and learning styles among students with this powerful series Each book offers practical research based guidance to differentiating instruction in the mathematics classroom The authors provide dozens of ready to use differentiated tasks including reproducibles along with ways to scaffold mathematical learning strategies for providing and structuring choice within classrooms guidance in leading large group discussions when students are completing different activities and engaging ways to address NCTM's Principles and Standards for School Mathematics and Curriculum Focal Points **Cognitive Neurosciences** Mr. Rohit Manglik, 2024-01-08 EduGorilla Publication is a trusted name in the education sector committed to empowering learners with high quality study materials and resources Specializing in competitive exams and academic support EduGorilla provides comprehensive and well structured content tailored to meet the needs of students across various streams and levels *The Cognitive Neurosciences* Michael S. Gazzaniga, 2009-09-18 The fourth edition of *The Cognitive Neurosciences* continues to chart new directions in the study of the biologic underpinnings of complex cognition the relationship between the structural and physiological mechanisms of the nervous system and the psychological reality of the mind The material in this edition is entirely new with all chapters written specifically for it Book Jacket *Performance Assessment* Brian McLean Semple, 1992 The second International Assessment of Educational Progress focused on the mathematics and science achievement of 13 year olds Performance assessments were used as part of the overall assessment in four countries England Scotland Soviet Union and Taiwan and five Canadian provinces The performance assessment approach drew heavily on the experience of the United Kingdom in such assessments but added features to meet the needs of an international study The performance tasks required students to apply concepts observe measure manipulate equipment and materials and record and interpret data Approximately 3 000 students participated in the 1991 mathematics and science assessments Scores varied widely from task to task and from country to country Relative performance of countries and provinces generally differed from those identified by written curriculum based tests A major lesson learned from the experimental test administration is that this form of performance assessment can be used reliably in international comparative studies although at an estimated cost three to four times greater than that for an equivalent number of written test questions Sample mathematics and science tasks are included and there is an appendix on problem solving in mathematics that describes outcomes produced by Scottish students SLD
