

Homework Set #5 – Solutions

1. This problem is essentially Messiah, Chapter 18, Problem 4 (or Sakurai, Chapter 5, Problem 1). Consider a one-dimensional harmonic oscillator perturbed by a constant force

$$H = \frac{p^2}{2m} + \frac{1}{2}m\omega^2 x^2 - Fx$$

- a) Show that the first order perturbation in the energy levels vanishes.

Since we will need to find the second order perturbation in part b), let us consider the general matrix element

$$V_{mn} = -F \langle m^{(0)} | x | n^{(0)} \rangle$$

The operator x is given in terms of creation and annihilation operators by $x = \sqrt{\hbar/(2m\omega)}(a^\dagger + a)$. Thus

$$\begin{aligned} V_{mn} &= -F \sqrt{\frac{\hbar}{2m\omega}} \langle m^{(0)} | (a^\dagger + a) | n^{(0)} \rangle \\ &= -F \sqrt{\frac{\hbar}{2m\omega}} [\sqrt{n+1} \delta_{m,n+1} + \sqrt{n} \delta_{m,n-1}] \end{aligned}$$

This indicates that the x operator changes the oscillator number by ± 1 . In particular, $V_{nn} = 0$, which demonstrates that the first order energy perturbation vanishes.

- b) Now calculate the eigenenergies E_n up to second order in the perturbation.

Using the matrix element calculated above, we find

$$\begin{aligned} E_n^{(2)} &= \sum_{k \neq n} \frac{|V_{kn}|^2}{E_n^{(0)} - E_k^{(0)}} = \frac{|V_{n+1,n}|^2}{E_n^{(0)} - E_{n+1}^{(0)}} + \frac{|V_{n-1,n}|^2}{E_n^{(0)} - E_{n-1}^{(0)}} \\ &= F^2 \frac{\hbar}{2m\omega} \left[\frac{n+1}{-\hbar\omega} + \frac{n}{\hbar\omega} \right] = -\frac{F^2}{2m\omega^2} \end{aligned}$$

Combined with the zeroth order energy, this gives

$$E_n = (n + \frac{1}{2})\hbar\omega - \frac{F^2}{2m\omega^2}$$

- c) Show that the second-order perturbation result gives the exact eigenenergies (which may be obtained by completing the square in H). Explain why this happens.

Anglo-American Connections in Japanese Chemistry Yoshiyuki Kikuchi, 2013-12-18 Anglo Japanese and American Japanese connections in chemistry had a major impact on the institutionalization of scientific and technological higher education in Japan from the late nineteenth century and onwards They helped define the structure of Japanese scientific pedagogical and research system that lasted well into the post World War II period of massive technological development when it became one of the biggest providers of chemists and chemical engineers in the world next to Europe and the United States In telling this story *Anglo American Connections in Japanese Chemistry* explores various sites of science education such as teaching laboratories and classrooms where British and American teachers mingled with Japanese students to shed new light on the lab as a site of global human encounter and intricate social relations that shaped scientific practice

An Interpretive Introduction to Quantum Field Theory Paul Teller, 2020-07-21 Quantum mechanics is a subject that has captured the imagination of a surprisingly broad range of thinkers including many philosophers of science Quantum field theory

however is a subject that has been discussed mostly by physicists This is the first book to present quantum field theory in a manner that makes it accessible to philosophers Because it presents a lucid view of the theory and debates that surround the theory An Interpretive Introduction to Quantum Field Theory will interest students of physics as well as students of philosophy Paul Teller presents the basic ideas of quantum field theory in a way that is understandable to readers who are familiar with non relativistic quantum mechanics He provides information about the physics of the theory without calculational detail and he enlightens readers on how to think about the theory physically Along the way he dismantles some popular myths and clarifies the novel ways in which quantum field theory is both a theory about fields and about particles His goal is to raise questions about the philosophical implications of the theory and to offer some tentative interpretive views of his own This provocative and thoughtful book challenges philosophers to extend their thinking beyond the realm of quantum mechanics and it challenges physicists to consider the philosophical issues that their explorations have encouraged
