ENGINE

AIR FILTER

The air filtering is performed by means of a folded paper element protected within a steel cover which is contained in a sheet metal cylinder.

Every 20 work hours: Empty and clean the dust container. Remove the dust bowl from the filter body (1 Fig. 18) after having unscrewed the fastening screws. Cleaning should be carried out exclusively with a clean dry rag. When re-assembling, make sure that the upper notch and quadrant (2 Fig. 18) are uppermost, as indicated by the two arrows on the outside of the dust container.
