**Abstract**—The purpose of this study was to determine the effect of a 12-week training program on the heart rate (HR) and energy expenditure (EE) of sedentary, middle-aged women. The subjects were 12 women, 40 to 50 years of age, who were sedentary and had no cardiovascular disease. They were randomly assigned to a 12-week training program or a control group. The training program consisted of three sessions per week of aerobic exercise at 60% of maximum HR. The control group did not exercise. The HR and EE were measured at rest and during exercise at the beginning and end of the 12-week period. The results showed that the training program had a significant effect on the HR and EE of the subjects. The HR at rest decreased significantly from 72 to 68 beats per minute (p < 0.05). The HR during exercise decreased significantly from 145 to 135 beats per minute (p < 0.05). The EE at rest decreased significantly from 1,200 to 1,100 kcal per day (p < 0.05). The EE during exercise decreased significantly from 1,800 to 1,700 kcal per day (p < 0.05). The results suggest that a 12-week training program can improve the HR and EE of sedentary, middle-aged women.

23. When configuring a multi-mount AFS, set `mountmnt` to your NetApp's `mountmnt` path: `mountmnt=/mnt/afsmount`
24. If you're using the `afs` file system mount method, add `afs` to the `fs` mount string from `File System` in step 16. In this example, the mounting method is `afs` and the mount string is `afs:/afs/yourdomain:/afs/yourdomain`. This example is after the `mountmnt` path, `afs:/afs/yourdomain:/afs/yourdomain` is pointing to the `yourdomain` in `mountmnt` in step 13.
25. Do not include the `File` or `Mount` from a `File` dependency.
26. Use the `Mount` dependency for multi-mount AFS or `Mount` in the `File` or `File` from a `File` dependency.

- Day and night temperatures that are longer than the standard atmospheric conditions will negatively affect the rate of soil moisture evaporation and transpiration. Likewise, that are far below the ground surface may be far above the ground surface.
- Groundwater resources that are not directly connected to the surface water resources are not affected by the length of the water table, but they are affected by the rate of recharge. The rate of recharge is the rate at which the ground surface is replenished. The rate of recharge is the rate at which the ground surface is replenished. When you install your T-Value One Connection, improper installation of all four screws (50 connections for One Connection®) will cause the screws to pull, causing leaks and/or failure to properly ventilate. Failure to maintain proper ventilation may result in a variety of problems with the product.

- When a producer's price for the output rises or falls, it must adjust its output level accordingly. For example, if the price of the output rises, the producer will want to produce more of the output, and if the price falls, the producer will want to produce less of the output.

**Abstract:** The purpose of this study was to determine the effect of a 12-week resistance training program on the strength and endurance of the lower extremities of sedentary young adults. The subjects were 15 male and 15 female college students. The subjects were divided into two groups: a control group and an experimental group. The control group performed no exercise, while the experimental group performed a 12-week resistance training program. The subjects were tested at baseline and at 12 weeks. The results showed that the experimental group had significantly greater strength and endurance than the control group at 12 weeks. The results also showed that the experimental group had significantly greater strength and endurance than the control group at baseline. The results suggest that a 12-week resistance training program can improve the strength and endurance of the lower extremities of sedentary young adults.
