Trends in Industrial and Applied Mathematics Abul Hasan Siddiqi,M. Kocvara,2013-12-01 An important objective of the study of mathematics is to analyze and visualize phenomena of nature and real world problems for its proper understanding Gradually it is also

becoming the language of modern financial instruments To project some of these developments the conference was planned under the joint auspices of the Indian Society of Industrial and Applied mathematics ISIAM and Guru Nanak Dev University G N D U Amritsar India Dr Pammy Manchanda chairperson of Mathematics Department G N D U was appointed the organizing secretary and an organizing committee was constituted The Conference was scheduled in World Mathematics Year 2000 but due one reason or the other it could be held during 22-25 January 2001 However keeping in view the suggestion of the International Mathematics union we organized two symposia Role of Mathematics in industrial development and vice versa and How image of Mathematics can be improved in public These two symposia aroused great interest among the participants and almost everyone participated in the deliberations The discussion in these two themes could be summarized in the lengthy following lines Tradition of working in isolation is a barrier for interaction with the workers in the other fields of science and engineering what to talk of non academic areas specially the private sector of finance and industry Therefore it is essential to build bridges within institutions and between institutions

Nonstandard Finite Difference Models of Differential Equations Ronald E. Mickens, 1994 This book provides a clear summary of the work of the author on the construction of nonstandard finite difference schemes for the numerical integration of differential equations The major thrust of the book is to show that discrete models of differential equations exist such that the elementary types of numerical instabilities do not occur A consequence of this result is that in general bigger step sizes can often be used in actual calculations and or finite difference schemes can be constructed that are conditionally stable in many instances whereas in using standard techniques no such schemes exist The theoretical basis of this work is centered on the concepts of exact and best finite difference schemes In addition a set of rules is given for the discrete modeling of derivatives and nonlinear expressions that occur in differential equations These rules often lead to a unique nonstandard finite difference model for a given differential equation
