y is directly proportional to R^2
When $R = 4$, $y = 24$

Work out the value of R when $y = 1350$

[5 marks]

$$y \propto R^2$$

$$y = kR^2$$

$$24 = k \times 4^2$$

$$R = 1.5$$

Answer $y = 1.5R^2$

Nijs,2016-01-26 In today s increasingly globalized environment many economic fundamentals need to be reconsidered in order to regain stability in the global marketplace One such consideration is the failing dynamics of the international tax infrastructure Neoliberalism 2 0 brings a 21st century assessment of the Pigovian taxes considering a completely new calibration of the international tax systems inspired by the historically developed Pigovian tax model The book considers the impact neoliberalism had and will have on regulatory infrastructure democracy in an era of globalization and reduced legitimization of the national state The Pigovian model brings home the often forgotten relationship between taxation as a part of the regulatory sphere macro economics and the political philosophical context in which law and economics emerge The model also takes into account the phenomena of globalization and financialization and is tested using the financial sector as an example This book addresses the many challenges a Pigovian shift would imply for the sovereign and its national economies Neoliberalism 2 0 demonstrates the ability to design a paradigm changing alternative to the current tax infrastructure while taking into account a low economic growth environment of the future the implications of globalization and the changing relationship between citizens and their state **Dynamics, Strength of Materials and Durability in Multiscale Mechanics** Francesco dell'Isola,Leonid Igumnov,2020-11-01 This book reviews the mathematical modeling and

experimental study of systems involving two or more different length scales The effects of phenomena occurring at the lower length scales on the behavior at higher scales are of intrinsic scientific interest but can also be very effectively used to determine the behavior at higher length scales or at the macro level Efforts to exploit this micro and macro coupling are naturally being pursued with regard to every aspect of mechanical phenomena This book focuses on the changes imposed on the dynamics strength of materials and durability of mechanical systems by related multiscale phenomena In particular it addresses 1 the impacts of effective dissipation due to kinetic energy trapped at lower scales 2 wave propagation in generalized continua 3 nonlinear phenomena in metamaterials 4 the formalization of more general models to describe the exotic behavior of meta materials 5 the design and study of microstructures aimed at increasing the toughness and durability of novel materials
