Developing Software for Symbian OS Steve Babin, 2008-02-28 Many problems encountered by engineers developing code for specialized Symbian subsystems boil down to a lack of understanding of the core Symbian programming concepts. Developing Software for Symbian OS remedies this problem as it provides a comprehensive coverage of all the key concepts. Numerous examples and descriptions are also included which focus on the concepts the author has seen developers struggle with the most. The book covers development ranging from low level system programming to end user GUI applications. It also covers the development and packaging tools as well as providing some detailed reference and examples for key APIs. The new edition includes a completely new chapter on platform security. The overall goal of the book is to provide introductory coverage of Symbian OS v9 and help developers with little or no knowledge of Symbian OS to develop as quickly as possible. There are few people with long Symbian development experience compared to demand due to the rapid growth of Symbian in recent years, and developing software for new generation wireless devices requires knowledge and experience of OS concepts. This book will use many comparisons between Symbian OS and other OSes to help in that transition. Get yourself ahead with the perfect introduction to developing software for Symbian OS.

Rare Earth Elements Volker Zepf, 2013-02-14 This thesis deals with Rare Earth Elements (REE) especially with neodymium used in permanent magnets from a very scientific basis by providing basic research data. Despite the fact that REE are newsworthy and very important elements for a considerable bandwidth of today's technologies accompanied by the monopolistic supply situation and Chinese politics, there are inexplicable data discrepancies about REE which have been recognized frequently but usually have not been addressed accordingly. So this analysis started with the hypothesis that the four application areas namely computer hard disk drives (HDD), mobile phones, wind turbines, and e-mobility/automotive traction account for about 80% of the global annual neodymium demand. The research methodology was a laboratory analysis of the composition of used magnets for HDDs and mobile phones and a literature and official report analysis of wind turbine and automotive neodymium use. The result was amazing and the hypothesis had to be withdrawn as these four areas only account for about 20% of neodymium use. This result raises some questions concerning actual use and thus potential recycling options.
