November 2005 Zimsec Physics Paper :

Land and Water Management in Southern Africa Calvin Nhira, Alfred Mapiki, Sello Patrick Rankhumise, 2008 The Southern African Development Community SADC and its Member States are making renewed efforts to revive agriculture in the region Given that much of it is water stressed appropriate and sustainable land and water management practices are vital to achieving this objective Recognising this SADC's Land and Water Management Applied Research and Training Programme has convened two scientific symposiums Held in Lilongwe Malawi in February 2006 the inaugural symposium brought together practitioners from 10 participating SADC countries to deliberate on land and water management for sustainable agriculture and discuss how the most recent research and development advances in land and water management might be made more relevant to policymakers as well as the region's small scale farmers The edited contributions to this first symposium appear in this volume The second symposium was held in Gaborone Botswana in February 2007 and brought together regional experts to discuss opportunities for improving water use and water use efficiency in agriculture in semi arid and arid areas The edited contributions to the second symposium appear in a companion volume entitled Land and Water Management in Southern Africa Towards Better Water Use in Agriculture in Semi Arid and Arid Areas AISA 2008 It is hoped that these two volumes will help to disseminate regional expertise on land and water management to a wider audience thus helping policy makers and others to strengthen the agricultural sector in the region and in so doing improve its food security and the wellbeing of its people

Small reservoirs in Africa: a review and synthesis to strengthen future investment Saruchera, D., Lautze, Jonathan, 2019-11-04 *Limits to Climate Change Adaptation* Walter Leal Filho, Johanna Nalau, 2017-11-15 This book sheds new light on the limits of adaptation to anthropogenic climate change The respective chapters demonstrate the variety of and interconnections between factors that together constitute the constraints on adaptation The book pays special attention to evidence that illustrates how and where such limits have become apparent or are in the process of establishing themselves and which indicates future trends and contexts that might prove helpful in understanding adaptation limits In particular the book provides an overview of the most important challenges and opportunities regarding adaptation limits at different temporal jurisdictional and spatial scales while also highlighting case studies projects and best practices that show how they may be addressed The book presents innovative multi disciplinary research and gathers evidence from various countries sectors and regions the goal being to advance our understanding of the limits to adaptation and ways to overcome or modify them *The State of African Cities 2008*, 2008 With rapidly increasing urban populations cities in Africa are faced with enormous challenges and will have to find ways to facilitate by 2015 urban services livelihoods and housing for more than twice as many urban dwellers than it has today A worrying trend with the African urbanization process is that it is a process rooted in poverty rather than an industrialization induced socio economic transition as in other major world urban regions Africa's escalating urban problems have received less attention

than warranted and now at the dawn of Africa's urban age these need to be addressed publisher **Indigenous and institutional profile: Limpopo River Basin** Anton Earle, Jaqui Goldin, Rose Machiridza, Daniel Malzbender, Emmanuel Manzungu, Tiego Mpho, 2006-10-17 This paper presents an overview of water related governance structures and institutions in the Limpopo Basin. The Basin is of critical socio-economic importance to the 14 million people distributed across the four riparian states of Botswana, Mozambique, South Africa and Zimbabwe. Urban centers mostly in Botswana and South Africa are major water users supplying industries, power stations and municipalities. Water is also used in rural areas for domestic livestock watering and irrigation purposes. While irrigated agricultural activities are largely concentrated in South Africa and Zimbabwe, the majority of rural populations engage in rain-fed agriculture which does not guarantee secure livelihoods. This is due in large part to the region's semi-arid climate where only two out of every five agricultural seasons produce reasonable crop yields. These climatic conditions emphasize the need for effective management of transboundary water resources and effective governance structures, delivery and control mechanisms. Appropriate institutional frameworks and governance structures have a pivotal role in defining the socio-economic situation of the people in the Basin. **Book Review Index**, 2006. Every 3rd issue is a quarterly cumulation. **Integrated Water Resources Management, Institutions and Livelihoods under Stress** Collin C. Mabiza, 2018-03-09 The majority of people in the Limpopo river basin depend on rain-fed agriculture. Unfortunately, the Limpopo is water scarce and parts of the basin such as Zimbabwe's Mzingwane catchment are under stress in terms of agro-ecological and socio-politico-economic conditions. Integrated Water Resources Management (IWRM) has been adopted in the river basin in *Climate Change, Assets and Food Security in Southern African Cities* Bruce Frayne, Caroline Moser, Gina Ziervogel, 2013-03-01 There is overwhelming evidence that the climate is changing. It is the poorest countries and people who are the most vulnerable to this threat and who will suffer the most. This book shows how increasing urbanization and growing poverty levels mean that it is imperative to ask how climate change might impact on asset accumulation and food security for the urban poor. It demonstrates how these three often separate foci can be brought together to frame a holistic urban adaptation approach. Furthermore, although much has been written about climate change, limited evidence exists in southern Africa of how climate change has been integrated in urban planning. The authors explore the urban climate change nexus linking asset adaptation, climate change science and food security through several case study cities. These include Cape Town, George and Khara Hais, South Africa; Lusaka, Zambia; Maputo, Mozambique; Mombasa, Kenya; and Harare, Zimbabwe. The results shed light on how this nexus might be explored from different perspectives, both theoretical and practical, in order to plan for a more resilient future. *Climate Change Assets and Food Security in Southern African Cities* comprises ten chapters which focus on southern African cities, with each chapter written by highly experienced academics, research-focused practitioners and professional planners. Although the book concentrates on southern African cities, the insights which are presented can be used to understand other urban centres in low and middle income countries.

outside of this region and around the world Rethinking Development Challenges for Public Policy K. Hanson,G. Kararach,T. Shaw,2012-04-05 Covers topical issues for Africa s development economics and politics of climate change water management public service delivery and delivering aid The authors argue that these issues should be included in the post MDG paradigm and add an important voice to recent moves by academics and practitioners to engage with each other
