

## Lesson 1 Polynomial functions

A **polynomial function**  $y = f(x)$  is a function of the form  $f(x) = a_n x^n + a_{n-1} x^{n-1} + \dots + a_2 x^2 + a_1 x + a_0$  where the coefficients  $a_n, a_{n+1}, \dots, a_2, a_1, a_0$  are real constants and  $n$  is a non-negative integer.

Ex. These are polynomials:  $y = x^4 + 3x^3 - 2x^2 + 5x - 2$

$$y = 2x^2 - 3x$$

$$y = 8 \quad (y = 8x^0)$$

These are not polynomials:  $y = 2\sqrt{x} + 8$

$$y = 3x^2 - 2x^{-2}$$

**Degree:** The highest power of  $x$  in a polynomial

**Leading coefficient ( $a_n$ )** : the coefficient of the greatest power of  $x$ .

**Constant term ( $a_0$ )** : the term without the variable.

Ex.  $f(x) = 3x^5 - 4x^3 - 3x + 8$

### Some special polynomials

|---------|--------------------------------------------------------------|----------------------|
| $n = 0$ | $f(x) = a_0$                                                 | (Constant function)  |
| $n = 1$ | $f(x) = a_1 x + a_0$                                         | (Linear function)    |
| $n = 2$ | $f(x) = a_2 x^2 + a_1 x + a_0$                               | (Quadratic function) |
| $n = 3$ | $f(x) = a_3 x^3 + a_2 x^2 + a_1 x + a_0$                     | (Cubic function)     |
| $n = 4$ | $f(x) = a_4 x^4 + a_3 x^3 + a_2 x^2 + a_1 x + a_0$           | (Quartic function)   |
| $n = 5$ | $f(x) = a_5 x^5 + a_4 x^4 + a_3 x^3 + a_2 x^2 + a_1 x + a_0$ | (Quintic function)   |

**Finite differences** provide a means for identifying polynomial functions from a table of values.

Ex. Given the following data, determine the degree of the polynomial function it represents.

a)

| $x$ | $y$ | $\Delta y$     |
|-----|-----|----------------|
| -3  | -4  | $2 - (-2) = 2$ |
| -2  | -2  | $0 - (-2) = 2$ |
| -1  | 0   | 2              |
| 0   | 2   | 2              |
| 1   | 4   | 2              |
| 2   | 6   | 2              |
| 3   | 8   | 2              |

Since the first differences are constant,  
the function is a linear polynomial

Beckmann, Denisse R. Thompson, Rheta N. Rubenstein, 2009-11-02

Too many high school students faced with mathematics in courses at the level of algebra and beyond find themselves struggling with abstract concepts and unwilling to pursue further study of mathematics. When students curtail their course taking in mathematics they may be impacting their college and career options. Thus high school mathematics teachers have the responsibility to help students recognize the value and importance of mathematics while also designing instruction that makes mathematics accessible to all students. Ball and Bass 2000 as well as other mathematics educators have recognized that mathematics teachers not only need to know mathematics content and mathematics pedagogy i.e. teaching strategies but they also need to know how these ideas are integrated. This mathematical knowledge for teaching is the knowledge that teachers of mathematics need and it differs from the knowledge that research or applied mathematicians must know. This text is designed to provide teachers with insights into this mathematical knowledge for teaching. Teaching and Learning High School Mathematics is likely different from many other texts that you have used. It integrates both content and pedagogy to help you develop and build your own understanding of teaching. The text is designed to help you develop deep conceptual understanding of fundamental mathematics. Ma 1999 so that you are able to approach mathematics from multiple perspectives with many tools. Such flexibility in teaching is essential if teachers are to help all students become mathematically proficient. Throughout this book you are encouraged to work in cooperative teams. This strategy is designed to help you develop a mathematics learning community and build a professional network that will be a valuable resource during your professional career. Hopefully you will experience the benefits of engaging in rich mathematical discussions with peers and consider how to encourage such learning environments in your own classrooms. Lesson planning is another element pervasive throughout this text. To help teachers plan for effective student centered lessons the Question Response Support QRS Guide is introduced in Lesson 1.1 and used throughout the remainder of the lessons. The QRS Guide is a tool on which teachers may record tasks or questions Q for students expected and observed student responses R and teacher support S in the form of additional just enough questions to support students in their progress on the task. In each unit teachers expand their repertoire of teaching and learning elements and strategies and incorporate these elements as they plan additional lesson segments. In Unit 4 lesson planning is formally introduced as teachers put together elements from previous units into complete cohesive lesson plans.
