Abstract—The purpose of this study was to determine the effect of a 10-week training program on the heart rate (HR) and heart rate reserve (HRR) of sedentary middle-aged men. The subjects were randomly assigned to a control group (CG) and an exercise group (EG). The EG performed a 10-week training program consisting of 30 min of aerobic exercise, 3 times per week. The CG did not exercise. The HR and HRR were measured at rest and during a maximal exercise test at baseline and after 10 weeks. The EG showed a significant decrease in HR and HRR at rest and during maximal exercise compared to the CG. The results suggest that a 10-week training program can improve the cardiovascular fitness of sedentary middle-aged men.

- Day and night periods that are longer than the standard 24 hours occur most commonly with the use of artificial light or natural light sources. To avoid this, there are two things the producer should be aware of: the time of the event.
- Artificial sources of light will come with their own built-in standards or specifications, the length of the season may vary depending on the soil source and location.
- The soil temperature and humidity will vary, change the growing conditions, the growing season, and the growing season's length. The producer should be aware of these things and avoid them. Some of the most common mistakes are:

When you install your T-Value One Connection, improper installation of all four screws (50 combinations for One Connection) will void the warranty. Please, before installing, refer to the correct installation instructions. Failure to maintain proper ventilation may result in a variety of problems with the product.

- When a producer's price for the output rises or falls, it must adjust its output level accordingly. A rise in the price of the output will cause a producer to produce more output, and a fall in the price of the output will cause a producer to produce less output.
