

INCHING PEDAL

The inching pedal, 1, is installed in place of the clutch pedal found on tractors with a conventional transmission. The inching pedal operates like a clutch for safe, accurate positioning of the tractor when hitching up implements or operating in confined spaces.

6

Optimum inching control, particularly with heavy loads, is achieved in the lowest ratios (F1 and R3). The degree of inching control gradually diminishes as higher gear ratios are selected up to 10th speed. At gear ratios higher than 10th, the electronic management system takes over to protect the system from abuse.

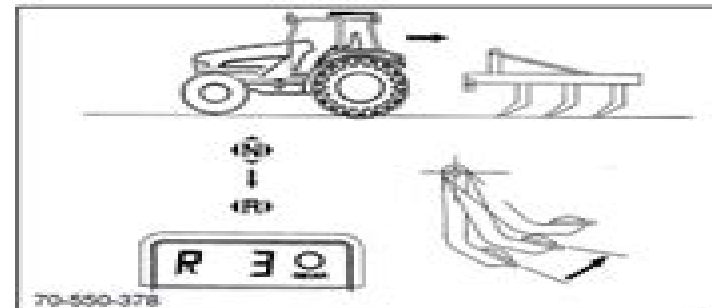

IMPORTANT: To ensure maximum transmission life, avoid using the inching pedal as a footrest or "riding" the pedal. Use of the inching pedal is only necessary if the low gears are not slow enough at moderate/low engine speeds to give precise control for operations such as implement attachment.

When using the inching pedal, particularly at high engine speeds, avoid stalling the engine. Lubrication of the transmission ceases under stall conditions and is detrimental to the transmission.

The inching pedal may also be used to automatically select a gear ratio to match load, engine speed, and road conditions. See "Speed Matching" later in this section.

To stop the tractor in an emergency, depress the inching pedal and apply both foot brakes together.

The inching pedal is not required for normal gear changes.
